IMPORTANT NOTICE

- **This dealer's manual is intended primarily for use by professional bicycle mechanics.**

Users who are not professionally trained for bicycle assembly should not attempt to install the components themselves using the dealer's manuals. If any part of the information on the manual is unclear to you, do not proceed with the installation. Instead, contact your place of purchase or a local bicycle dealer for their assistance.

- Make sure to read all instruction manuals included with the product.
- Do not disassemble or modify the product other than as stated in the information contained in this dealer's manual.
- All dealer's manuals and instruction manuals can be viewed on-line on our website (<http://si.shimano.com>).
- Please observe the appropriate rules and regulations of the country, state or region in which you conduct your business as a dealer.
- The Bluetooth® word mark and logos are registered trademarks owned by the Bluetooth SIG, Inc. and any use of such marks by SHIMANO INC. is under license.
Other trademarks and trade names are those of their respective owners.

For safety, be sure to read this dealer's manual thoroughly before use, and follow it for correct use.

The following instructions must be observed at all times in order to prevent personal injury and physical damage to equipment and surroundings. The instructions are classified according to the degree of danger or damage which may occur if the product is used incorrectly.

 **DANGER**

Failure to follow the instructions will result in death or serious injury.

 **WARNING**

Failure to follow the instructions could result in death or serious injury.

 **CAUTION**

Failure to follow the instructions could cause personal injury or physical damage to equipment and surroundings.

TO ENSURE SAFETY

Be sure to also inform users of the following:

■ Lithium ion battery

Be sure to observe the following instructions in order to avoid burns or other injury from fluid leakage, overheating, fire, or explosion.

- Use the designated charger to charge the battery. If any non-specified items are used, fire, overheating or leakage may occur.
- Do not heat the battery or throw it into fire. If this is not observed, fire or bursting may occur.
- Do not deform, modify, disassemble or apply solder directly to the battery. Do not leave the battery in places which may exceed 60°C in temperature, such as places which are exposed to direct sunlight inside vehicles on hot days or near stoves. If this is not observed, leakages, overheating or bursting may cause fire, burns, or other injuries.
- Do not connect the (+) and (-) terminals with metallic objects. Do not carry or store the battery together with metallic objects such as necklaces or hairpins. If this is not observed, short-circuits, overheating, burns or other injury may occur.
- If any liquid leaking from the battery gets into the eyes, immediately wash the affected area with clean water without rubbing the eyes, and then seek medical attention.

■ Battery charger/Battery charger cord

Be sure to observe the following instructions in order to avoid burns or other injury from fluid leakage, overheating, fire, or explosion.

- Do not get the charger wet or use it while it is wet, and do not touch or hold it with wet hands. If this is not observed, problems with operation or electric shocks may occur.
- Do not cover the charger with cloths while it is in use. If this is not observed, heat may build up and the case may become deformed, or fire or overheating may occur.
- Do not disassemble or modify the charger. If this is not observed, electric shocks or injury may occur.
- Use the charger at the specified power supply voltage only. If a power supply voltage other than that specified is used, fire, explosions, smoke, overheating, electric shocks or burns may occur.
- Do not touch metallic parts of the charger or the AC adapter if there is a lightning storm. If lightning strikes, electric shocks may occur.

■ SM-BCR2: Battery charger for SM-BTR2/BT-DN110

- Use an AC adapter with a USB port with a voltage of 5.0Vdc and with a current equal to or higher than 1.0Adc. If the one with a current lower than 1.0A is used, the AC adapter may heat up, potentially causing a fire, smoke, overheating, destruction, electric shock, or burns.

 **WARNING**

- **Be sure to follow the instructions provided in the manuals when installing the product.**

It is recommended to use genuine Shimano parts only. If parts such as bolts and nuts become loose or damaged, the bicycle may suddenly fall over, which may cause serious injury.

In addition, if adjustments are not carried out correctly, problems may occur, and the bicycle may suddenly fall over, which may cause serious injury.

-  Be sure to wear safety glasses or goggles to protect your eyes while performing maintenance tasks such as replacing parts.

- This dealer's manual is for use with the DURA-ACE R9150 series (electronic gear shifting system) only.

For information on products not covered in this manual, please look up the model on the website (<http://si.shimano.com>).

- After reading the dealer's manual thoroughly, keep it in a safe place for later reference.

Be sure to also inform users of the following:

- *Intervals between maintenance depend on the use and riding circumstances. Clean the chain with an appropriate chain cleaner regularly. Never use alkali based or acid based solvents, such as rust cleaners. If those solvents are used the chain might break and cause serious injury.*
- Check that the wheels are fastened securely before riding the bicycle. If the wheels are loose in any way, they may come off the bicycle and serious injury may result.
- Check the chain for any damage (deformation or crack), skipping, or other abnormalities such as unintended gear shifting. If any problems are found, consult a dealer or an agency.
The chain may break, and you may fall.
- Be careful not to let the hemming of your clothes get caught in the chain while riding. Otherwise you may fall off the bicycle.

■ **About the multi-shift function**

- On this system, the multi-shift function can be configured using E-TUBE PROJECT. The gears will continue to shift when the shifting switch is pressed using the multi-shift function. Shifting speed setting for multi-shift can also be modified. When modifying the gear changing settings for multi-shift, carefully read "**Settings customizable in E-TUBE PROJECT**" in this dealer's manual.
- If crank revolutions are set to low under faster setting of the multi-shift shifting speed, the chain will be unable to follow the movement of the rear derailleur, possibly leading to issues such as the chain slipping over the tip of the cassette sprocket teeth, the cassette sprocket deforming, or the chain breaking.

Item	Multi-shift speed	Characteristics	Usage notes	Crank rotation speed when operating multi-shift
Very fast	High speed	Quick multi-shifting is possible <ul style="list-style-type: none"> • The crank rotation speed can be adjusted quickly depending on changes in riding conditions. • The speed can be adjusted quickly. 	<ul style="list-style-type: none"> • Over-shifting occurs easily. • If the rotation speed of the crank is low, the chain will be unable to follow the movement of the rear derailleur. The chain may therefore slip over the tip of the cassette sprocket teeth. 	High crank rotation speed
Fast				
Normal	Default setting			
Slow				
Very slow	Low speed	Accurate multi-shifting is possible	Multi-shifting takes some time	

By default it is set to **Normal**.

Fully understand the features of the multi-shift speed, and choose a multi-shift gear shifting setting according to the riding conditions (terrain, riding method, etc.).

■ Lithium ion battery

- Do not place the battery into fresh water or sea water, and do not allow the battery terminals to get wet. If this is not observed, fire, bursting or overheating may occur.
- Do not use the battery if it has any noticeable scratches or other external damage. If this is not observed, bursting, overheating or problems with operation may occur.
- Do not throw or subject the battery to strong shock. If this is not observed, bursting, overheating or problems with operation may occur.
- Do not use the battery if leakages, discoloration, deformation or any other abnormalities occur. If this is not observed, bursting, overheating or problems with operation may occur.
- If any leaked fluid gets on your skin or clothes, wash it off immediately with clean water. The leaked fluid may damage your skin.
- The operating temperature ranges for the battery are given below. Do not use the battery in temperatures outside these ranges. If the battery is used or stored in temperatures which are outside these ranges, fire, injury or problems with operation may occur.
 1. During discharge: -10°C - 50°C
 2. During charging: 0°C - 45°C

SM-BTR1: Lithium ion battery (external type)

- If charging is not complete after 1.5 hours, stop charging. If this is not observed, fire, bursting or overheating may occur.

SM-BTR2/BT-DN110: Lithium ion battery (built-in type)

- If the battery does not become fully charged after 4 hours, stop charging. If this is not observed, fire, bursting or overheating may occur.

■ Battery charger/Battery charger cord**SM-BCR1: Battery charger for SM-BTR1**

- Hold the power plug when connecting or disconnecting the plug. Failure to do so may cause a fire or electric shock.
- If the following occurs, stop using the device and contact a dealer. A fire or electric shock may occur.
 - * If heat or acrid-smelling smoke is coming out from the power plug.
 - * There may be a bad connection inside the power plug.
- Do not overload the electrical outlet with appliances beyond its rated capacity, and use only a 100 - 240V AC electrical outlet. If the electrical outlet is overloaded by connecting too many appliances using adapters, overheating resulting in fire may occur.
- Do not damage the power cord or power plug. (Do not damage, process, let near hot objects, bend, twist or pull them; do not place heavy objects on top or bundle them tightly.) If they are used while damaged, fire, electric shocks or short-circuits may occur.
- Do not use the charger with commercially-available electrical transformers designed for overseas use, as they may damage the charger.
- Always be sure to insert the power plug as far as it will go. If this is not observed, fire may occur.

SM-BCR2: Battery charger for SM-BTR2/BT-DN110

- Do not use any USB cable other than the USB cable which is supplied with the PC linkage device. This may cause a charging error, fire, or failure to connect to PC due to overheating.
- Do not connect the charger to PC when it is on standby. This may cause a PC failure depending on its specifications.
- When connecting or disconnecting the USB cable or the charger, be sure to hold the cable by the plug. Failure to do so may cause a fire or electric shock. If the following occurs, stop using the device and contact a dealer. A fire or electric shock may occur.
 - * If heat or acrid-smelling smoke is coming out from the power plug.
 - * There may be a bad connection inside the power plug.
- If it thunders while charging with an AC adapter with a USB port, do not touch the device, bicycle, or the AC adapter. If lightning strikes, electric shocks may occur.
- Use an AC adapter with a USB port with a voltage of 5.0Vdc and with a current equal to or higher than 1.0A_{dc}. If the one with a current lower than 1.0A_{dc} is used, a charge error may occur or the AC adapter may heat up, leading to a fire.
- Do not use a USB hub when connecting the cable to a computer USB port. This may cause a charging error or fire due to overheating.
- Be careful not to damage the charging cable. (Do not damage, process, let near hot objects, bend, twist or pull them; do not place heavy objects on top or bundle them tightly.) If they are used while damaged, fire, electric shocks or short-circuits may occur.

■ Brake

- Each bicycle may handle slightly differently depending on the model. Therefore, be sure to learn the proper braking technique (including brake lever pressure and bicycle control characteristics) and operation of your bicycle. Improper use of your bicycle's brake system may result in a loss of control or a fall, which could lead to severe injury. For proper operation, consult a professional bicycle dealer or the bicycle's owner's manual. It is also important to practice riding and braking, etc.
- If the front brake is applied too strongly, the wheel may lock and the bicycle may fall forward, and serious injury may result.
- Always make sure that the front and rear brakes are working correctly before riding the bicycle.
- The required braking distance will be longer during wet weather. Reduce your speed and apply the brakes early and gently.
- If the road surface is wet, the tires will skid more easily. If the tires skid, you may fall off the bicycle; therefore, to avoid this, reduce your speed and apply the brakes early and gently.

■ Dual control lever

- Because of the characteristics of the carbon fiber material, the lever should never be altered. Otherwise, the lever may break preventing braking operation.
- Check before riding that there is no damage such as carbon peeling or cracking. If there is any damage, stop using the bicycle and consult a dealer or an agency. Otherwise, the lever may break preventing braking operation.

For Installation to the Bicycle, and Maintenance:

- When the shifting switch is operated, the motor which drives the front derailleur will operate to the shifting position without stopping, so be careful not to get your fingers caught.

■ Points to note about the handlebars**ST-R9160/SW-R9160**

- Handle inner diameter: Ø19.0 - 22.5mm
- Handle outer diameter: Ø22.2 - 24.0mm
- Applicable handlebars: Carbon fiber handlebars (with aluminum inserts where the brake levers are installed) or aluminum handlebars.
* Carbon fiber handlebars without aluminum inserts, where the brake levers are installed, cannot be used.

EW-RS910 (Built-in bar end type)

- Handle inner diameter: Ø20.5 - 21.5mm
- Handle outer diameter: Ø23.8 - 24.2mm

**Be sure to also inform users of the following:****■ Lithium ion battery**

- Store the battery in a safe place away from the reach of infants and pets.

SM-BTR1: Lithium ion battery (external type)

- When you do not use the battery for a long period, remove and charge the battery before storage.

SM-BTR2/BT-DN110: Lithium ion battery (built-in type)

- When you do not use the battery for a long period, charge the battery before storage.

■ Battery charger/Battery charger cord**SM-BCR1: Battery charger for SM-BTR1**

- Disconnect the power plug from the electrical outlet before cleaning the charger.

SM-BCR2: Battery charger for SM-BTR2/BT-DN110

- Disconnect the USB cable or the charging cable when performing maintenance.

NOTE

Be sure to also inform users of the following:

- Be sure to rotate the crank when carrying out any operations which are related to gear shifting.
- Do not keep connecting and disconnecting the small waterproof connector. It may impair the function.
- Be careful not to get water into the terminal.
- The components are designed to be fully waterproofed to withstand wet weather riding conditions; however, do not deliberately place them into water.
- Do not clean the bicycle with a high-pressure washer. If water gets into any of the components, operating problems or rusting may result.
- Handle the product carefully, and avoid subjecting it to any strong shocks.
- Do not use thinners or similar substances to clean the products. Such substances may damage the surfaces.
- If gear shifting operations do not feel smooth, wash the derailleur and lubricate all moving parts.
- Contact the place of purchase for updates of the component software. The most up-to-date information is available on the Shimano website.
- Products are not guaranteed against natural wear and deterioration from normal use and aging.
- For maximum performance we highly recommend Shimano lubricants and maintenance products.

■ Lithium ion battery

- Lithium-ion batteries are recyclable, valuable resources.
For information on used batteries, contact the place of purchase or a bicycle dealer.
- Charging can be carried out at any time regardless of the amount of charge remaining. Always be sure to use the special battery charger to charge the battery until it is fully recharged.
- The battery is not fully charged at the time of purchase. Before riding, be sure to fully charge the battery.
- If the battery has become completely empty, charge it as soon as possible. If you leave the battery without charging it, it will cause the battery to deteriorate.
- The battery is an exhaustible item. The battery will gradually lose its capacity to charging after repeated use.
If the length of time that the battery can be used becomes extremely short, it has probably reached the end of its life, and so you will need to purchase a new battery.
- The life of the battery will vary depending on factors such as the storage method, the usage conditions, the surrounding environment and the characteristics of the individual battery pack.
- If storing the battery away for a long period, remove it when the battery level is 50% or higher or when the green indicator is illuminating in order to prolong its useful life; and it is recommended that you charge the battery about every six months.
- If the storage temperature is high, the performance of the battery is reduced, and its useable time will be shorter. When you use the battery after a long storage period, store the battery indoors where the battery will not be exposed to direct sunlight or rain.
- If the ambient temperature is low, the battery's usable time will be shorter.

SM-BTR1: Lithium ion battery (external type)

- When storing the battery away, remove the battery from the bicycle and install the terminal cover first.
- The charging time is approximately 1.5 hours. (Note that the actual time will vary depending on the remaining battery charge.)
- If the battery feels difficult to insert or remove, apply specified grease (premium grease) to the part that touches the O-ring at the side.

SM-BTR2/BT-DN110: Lithium ion battery (built-in type)

- After removing the battery from the bicycle for storage, install a dummy plug.
- The charging time of an AC adapter with a USB port is about 1.5 hours, and that of computer USB port type about 3 hours. (Note that the actual time will vary depending on the amount of charge remaining in the battery. Depending on the specifications of the AC adapter, recharging via the AC adapter may require as much time (about 3 hours) as recharging via PC.)

■ Battery charger/Battery charger cord

- Use this instrument under the direction of a safety supervisor or the direction for use. Do not allow physically, sensory, or mentally impaired persons, inexperienced persons, or persons with no required knowledge, including children, to use this product.
- Do not allow children to play near the product.

	<p>Disposal information for countries outside the European Union</p> <p>This symbol is only valid within the European Union. Contact the place of purchase or your nearest Shimano agent for advice on disposing.</p>
---	--

- Charge the battery indoors to avoid exposure to rain or wind.
- Do not use outdoors or in environments with high humidity.
- Do not place the battery charger on dusty floors when using it.
- Place the battery charger on a stable surface such as a table when using it.
- Do not place any objects on top of the battery charger or its cable.
- Do not bundle the cables.
- Do not hold the battery charger by the cables when carrying it.
- Do not apply excessive tension to the cables.
- Do not wash the battery charger or wipe it using detergents.

SM-BCR2: Battery charger/PC linkage device for SM-BTR2/BT-DN110

- Connect the PC linkage device directly to a computer, without using an intermediate device such as a USB hub.
- Do not ride the bicycle while the PC linkage device and cable are still connected to it.
- Do not connect two or more of the same units to the same connection point. If this is not done, the units may not operate correctly.
- Do not connect or disconnect units again while unit recognition is in progress or after recognition is complete. If this is not done, the units may not operate correctly.
Check the procedures which are given in the user's manual for the E-TUBE PROJECT when connecting and disconnecting units.
- The tightness of the PC link cable will tend to drop after repeated connections and disconnections. If this happens, replace the cable.
- Do not connect two or more PC linkage device at the same time. If two or more PC linkage device units are connected, they will not operate correctly.
In addition, the PC may need to be restarted if operating errors occur.
- PC linkage devices cannot be used while the charger is connected.

■ Rear derailleur

- If gear shifting operations do not feel smooth, wash the derailleur and lubricate all moving parts.
- If the chain keeps skipping, ask the place of purchase to replace the chainrings, sprockets and/or the chain.
- If there is a large gap in the pulleys which causes a lot of noise, ask the place of purchase to replace the pulleys.
- The gears should be periodically washed with a neutral detergent. In addition, cleaning the chain with neutral detergent and lubricating it can be an effective way of extending the life of the gears and the chain.
- If the amount of looseness in the links is so great that adjustment is not possible, you should replace the derailleur.

■ **Dual control lever**

- In the case of carbon levers, wash them with a soft cloth using a neutral detergent. Otherwise, the material may break down and be damaged.
- Avoid leaving the carbon levers in areas of high temperature. Also keep them well away from fire.

■ **Wireless unit**

- When using EW-WU111, combine it with one of the following units.
External type: BM-DN100, Built-in type: BT-DN110
- Do not keep connecting and disconnecting the small waterproof connector. It may impair the function.
- Be careful not to get water into the terminal.
- The components are designed to be fully waterproofed to withstand wet weather riding conditions; however, do not deliberately place them into water.
- Do not clean the bicycle with a high-pressure wash. If water gets into any of the components, operating problems or rusting may result.
- Handle the product carefully, and avoid subjecting it to any strong shocks.
- Do not position the unit on the side of the bicycle frame, as in the illustrations.
If the bicycle collapses, damage to the unit may result if the unit is caught between the bicycle frame and curbstones etc.

- Do not use thinners or similar substances to clean the products. Such substances may damage the surfaces.
- Do not leave the product in an area exposed to strong sunlight for an extended period of time.
- Do not disassemble the product as it cannot be reassembled.
- When cleaning the product, use a cloth moistened with a diluted neutral detergent.
- Contact the place of purchase for updates of the component software. The most up-to-date information is available on the Shimano website.

For Installation to the Bicycle, and Maintenance:

- Be sure to attach dummy plugs to any unused E-TUBE ports.
- Be sure to use Shimano original tool TL-EW02 to remove the electric wires.
- The motors of the motor unit cannot be repaired.
- Contact Shimano for information regarding the shipment of the battery charger to South Korea and Malaysia.
- Use an outer casing which still has some length to spare even when the handlebars are turned all the way to both sides. Furthermore, check that the shifting lever does not touch the bicycle frame when the handlebars are turned all the way.
- Use the specified cable for smooth operation.

■ Electric wires/Electric wire covers

- Secure the electric wires with a zip tie so that they do not interfere with the chainrings, sprockets or tires.
- The strength of the adhesive is fairly weak to prevent the paint on the frame from being peeled off at when removing the electric wire cover, such as when replacing the electric wires. If the electric wire cover is peeled off, replace it with a new one. When removing the electric wire cover, do not peel it off too vigorously. If so, the paint on the frame will peel off, too.
- Do not remove the wire holders which are attached to the built-in type electric wires (EW-SD50-I). The wire holders prevent the electric wires from moving inside the frame.
- When installing to the bicycle, do not forcibly bend the electric wire plug. It may result in a poor contact.

■ Dual control lever

- Dummy plugs are installed at the time of shipment from the factory. Do not remove them except when necessary.
- When routing the electric wires, take care to ensure that they do not interfere with the brake levers.

■ Rear derailleur

- Always be sure to adjust the top adjustment bolt and the low adjustment bolt according to the instructions given in the adjustment section. If these bolts are not adjusted, the chain may become clamped between the spokes and the largest sprocket and the wheel may lock, or the chain may slip onto a smaller sprocket.
- Periodically clean the derailleur and lubricate all moving parts (mechanism and pulleys).
- If gear shifting adjustments cannot be carried out, check the degree of parallel of the rear fork ends.
- The guide pulley and tension pulley are marked on one side with arrows to indicate the direction of rotation. When attaching the pulleys, make sure to orient them so that the sides marked with arrows face toward the bicycle.

The actual product may differ from the illustration because this manual is intended mainly to explain the procedures for using the product.

For Installation to the Bicycle:

■ **Notes on reinstalling and replacing components**

- When the product is reassembled or replaced, it is automatically recognized by the system to allow operation according to the settings.
- If the system does not operate after reassembly and replacement, follow the system power reset procedure below to check the operation.
- If the component configuration changes or malfunction is observed, use the E-TUBE PROJECT software to update the firmware of each component to the latest version and perform a check again. Also make sure that the E-TUBE PROJECT software is the latest version. If the software is not the latest version, the component compatibility or the product functions may not be available.

Be sure to also inform users of the following:

■ **About used batteries**

- Lithium-ion batteries are recyclable, valuable resources.
For information on used batteries, contact the place of purchase or a bicycle dealer.

■ **About system power reset**

- When the system fails to operate, it may be recovered by resetting the system power.
- After the battery is removed, about one minute is usually required for the system power to reset.

In the case of using SM-BTR1

- Remove the battery from the battery mount. After about one minute, install the battery.

In the case of using SM-BTR2/BT-DN110

- Disconnect the plug from SM-BTR2/BT-DN110. After about one minute, insert the plug.

■ **Connection and communication with PC**

- PC linkage devices can be used to connect a PC to the bicycle (system or components), and an E-TUBE PROJECT can be used to carry out tasks such as customizing single components or the whole system and updating their firmware.
If your versions of E-TUBE PROJECT software and firmware for each component are not up to date there could be problems operating the bicycle. Check the software version and update it to the latest one.

	PC linkage device	E-TUBE PROJECT	Firmware
SM-BMR2/SM-BTR2	SM-PCE1/SM-BCR2	Version 3.2.0 or greater	Version 3.0.0 or greater
BT-DN110/BM-DN100			Version 4.0.0 or greater *Pre-installed firmware is version 4.0.0.

■ **Connection and communication with smartphone or tablet**

- It is possible to customize single components or the system, and update firmware, using E-TUBE PROJECT for smartphones/tablets after connecting the bicycle (system or components) to a smartphone or tablet via Bluetooth LE.
 - E-TUBE PROJECT: app for smartphones/tablets
 - Firmware: software inside each component
- Disconnect Bluetooth LE when not using E-TUBE PROJECT for smartphones/tablets.
Using the wireless unit without disconnecting Bluetooth LE may result in high battery power consumption.

About compatibility with E-TUBE

- For details on the compatibility and functional limitations of units, refer to the following website.
(http://e-tubeproject.shimano.com/guide/#guide_list)

LIST OF TOOLS TO BE USED

LIST OF TOOLS TO BE USED

The following tools are needed for installation, adjustment, and maintenance purposes.

Tool		Tool		Tool	
	2mm hexagon wrench		Slotted screwdriver Blade width: 4.0 - 5.0mm Blade thickness: 0.5 - 0.6mm		Plastic mallet
	2.5mm hexagon wrench		3mm slotted screwdriver		Utility knife
	3mm hexagon wrench		4mm slotted screwdriver		Handlebar tape cutout tool
	4mm hexagon wrench		Hexalobular[#5]		TL-CT12
	5mm hexagon wrench		Snap ring pliers		Shimano original tool TL-EW02
	23mm hub spanner		Special E-ring removal tool		

INSTALLATION

INSTALLATION

■ Electric wire wiring diagram (overall conceptual diagram)

Lithium ion battery (external type) SM-BTR1

External type (SM-JC40)

SM-EW90-A/B

EW-RS910

Built-in bar end type

Built-in frame type

- (A) Battery mount SM-BMR2/ BM-DN100
- (B) Lithium ion battery (external type) SM-BTR1
- (C) Junction A SM-EW90-A/B
- (D) Electric wire EW-SD50
- (E) Junction B SM-JC40
- (F) EW-JC130
- (G) EW-RS910 (Built-in bar end type)
- (H) EW-WU111
- (I) EW-RS910 (Built-in frame type)

• Cable length (EW-SD50)

- [a] + [b] ≤ 900mm
- [a] + [c] ≤ 1100mm
- [d] ≤ 1400mm
- [e], [f] ≤ 500mm

• Cable length (EW-JC130)

EW-JC130 is available in three variations of differing length. Refer to the table and select the appropriate variation.

	L1 (mm)	L2 (mm)	L3 (mm)
EW-JC130-SS	350	50	250
EW-JC130-SM	350	50	450
EW-JC130-MM	550	50	550

- If using EW-WU111, use it in combination with BT-DN110 or BM-DN100.

Built-in type (SM-JC41)

SM-EW90-A/B

EW-RS910

Built-in bar end type

Built-in frame type

- (A) Battery mount SM-BMR2/ BM-DN100
- (B) Lithium ion battery (external type) SM-BTR1
- (C) Junction A SM-EW90-A/B
- (D) Electric wire EW-SD50-I
- (E) Junction B SM-JC41
- (F) EW-JC130
- (G) EW-RS910 (Built-in bar end type)
- (H) EW-WU111
- (I) EW-RS910 (Built-in frame type)

TECH TIPS

• Cable length (EW-SD50)

- [a] + [b] ≤ 1500mm
- [a] + [c] ≤ 1700mm
- [d] ≤ 1400mm
- [e], [f] ≤ 500mm

• Cable length (EW-JC130)

EW-JC130 is available in three variations of differing length.

Refer to the table and select the appropriate variation.

	L1 (mm)	L2 (mm)	L3 (mm)
EW-JC130-SS	350	50	250
EW-JC130-SM	350	50	450
EW-JC130-MM	550	50	550

- If using EW-WU111, use it in combination with BT-DN110 or BM-DN100.

Built-in battery type SM-BTR2/BT-DN110

Built-in type (SM-JC41)

SM-EW90-A/B

- (A) Lithium ion battery (built-in type) SM-BTR2/BT-DN110
- (B) Junction A SM-EW90-A/B
- (C) Electric wire EW-SD50-I
- (D) Junction B SM-JC41
- (E) EW-JC130
- (F) EW-RS910 (Built-in bar end type)
- (G) EW-WU111
- (H) EW-RS910 (Built-in frame type)

 **TECH TIPS**

• **Cable length (EW-SD50)**

- [a] + [b] ≤ 1500mm
- [a] + [c] ≤ 1700mm
- [d] ≤ 1400mm
- [e], [f] ≤ 500mm

Cable length (EW-JC130)

EW-JC130 is available in three variations of differing length.

Refer to the table and select the appropriate variation.

	L1 (mm)	L2 (mm)	L3 (mm)
EW-JC130-SS	350	50	250
EW-JC130-SM	350	50	450
EW-JC130-MM	550	50	550

- If using EW-WU111, use it in combination with BT-DN110 or BM-DN100.

INSTALLATION

▶▶ Using the Shimano original tool TL-EW02

■ Using the Shimano original tool TL-EW02

(A) Shimano original tool TL-EW02

NOTE

Use the Shimano original tool when connecting/disconnecting the electric wires. When installing the electric wire, do not forcibly bend the plug. It may result in a poor connection. When connecting electric wires, push them in until you feel and hear a click.

INSTALLATION

▶▶ Installation of the dual control lever and brake cable

■ Installation of the dual control lever and brake cable

⚠ WARNING

- Do not apply grease or other lubricants to the inner cable.
- Be sure to wipe off with a cloth any grease that adheres to the inner fixing section. After wiping off the grease, pass the inner cable through the outer casing. If grease adheres to the fixing section, the holding force of the brake cable may not be sufficient. If the holding force is insufficient, the brake cable will slacken resulting in a loss of brake control and possibly severe injury.

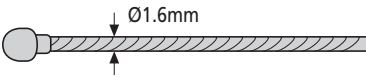

NOTE

- Be careful not let the BC-9000/R680 inner cable come into contact with the brake lever or the metal section (adjustment section) of the caliper brake. Fuzz may be generated when the inner cable is installed or when the coating is damaged during use, but this will not affect its functions.
- Use cables which are long enough that they still have some looseness even when the handlebars are turned all the way to both sides.

📖 TECH TIPS

For information on how to install the brake cable, refer to the dealer's manual for BR-R9100.

Cable to be used

BC-9000/BC-R680 inner cable	Outer casing
	

ST-R9150

1

Turn over the bracket cover from the front side.

Gently turn over the ends of the bracket cover with both hands and slowly push them down.

NOTE

Forcibly pulling it may cause damage to the bracket cover because of its material properties.

2

Use a 5mm hexagon wrench to tighten the clamp bolt at the top of the bracket.

(A) Clamp bolt

Tightening torque

6 - 8 N·m

NOTE

- With a carbon handle, even the recommended tightening torque may be too tight and cause damage to the handle, or too loose and not sufficiently attached. For the appropriate torque value, consult with the manufacturer of the completed bicycle or the manufacturer of the handle.
- The clamp band, clamp bolt, and clamp nut are not compatible with other products. Do not use with components that are used in other products.

INSTALLATION

▶▶ Installation of the dual control lever and brake cable

3

Depress the lever as if to brake and pass the brake cable through.

- (A)** Inner end
- (B)** Outer casing
- (C)** Cable hook

NOTE

Make sure that the inner end is firmly set in the cable hook.

4

Temporarily secure the outer casing to the handlebar (by using tape or a similar material).

- (A)** Outer casing
- (B)** Tape

ST-R9160

1

Route the outer casing and electric wire through the handlebar.

When installing the lever, adjust the length of the outer casing so that it can fit securely into the outer casing holder.

2

Connect the electric wire to the connector (female) extending from the lever.

- (A)** Connector (female)
- (B)** Electric wire

3

Install the brake lever to the handlebar by tightening clockwise with a hexagon wrench.

- (A)** Handlebar
- (B)** 4mm hexagon wrench

Tightening torque

6 - 8 N·m

TECH TIPS

The illustration is of the right brake lever.

NOTE

The knurled grooves should be aligned.

Knurled grooves

INSTALLATION

▶▶ Installation of the dual control lever and brake cable

4

Pass the inner cable through.

- (A) Outer casing
- (B) Inner cable
- (C) Outer casing holder

NOTE

Inner end

Make sure that the inner end is firmly set in the cable hook.

■ Installation of the front derailleur

Check if the frame to which the front derailleur will be installed is a direct mount type or band type.

Installation of the front derailleur (direct mount type frame)

NOTE

- With a carbon frame, even the recommended tightening torque may be too tight and cause damage to the frame, or too loose and not sufficiently attached to the frame. For the appropriate torque value, consult with the manufacturer of the completed bicycle or the manufacturer of the frame.
- When installing the front derailleur to a direct mount type frame, it is recommended to attach a support bolt to ensure optimum performance of the front derailleur. When a support bolt is attached, there is a risk that it will cause to damage the frame; therefore, be sure to attach a backup plate. (However, in some cases a support bolt and backup plate cannot be attached.)

1

Check where the support bolt makes contact with the seat tube when adjusting the front derailleur support bolt.

(z) Location where support bolt touches seat tube

(A) Support bolt

TECH TIPS

After the checking the position, loosen the support bolt and return it to its original position.

2

Attach the backup plate where the support bolt touches the seat tube.

After that install the front derailleur to the frame.

- (A) Backup plate
- (B) Mounting washer
- (C) Fixing bolt

Tightening torque

5 - 7 N·m

TECH TIPS

- Position the backup plate tape so that the tape does not come into direct contact with the support bolt.

- There is a backup plate with a curved adhesion surface and one with a flat adhesion surface, as shown in the illustration; use whichever type matches the shape of the frame.

3

Adjust so that there is a clearance of 1 – 3mm between the chain guide outer plate and the largest chainring.

[A-B] Clearance: 1 – 3mm

- (A) Chain guide outer plate
- (B) Largest chainring

▶▶ Installation of the front derailleur

4

Use a 5mm hexagon wrench to secure the chain guide outer plate so that the flat part of the plate is directly above the largest chainring and so that the rear edge of the chain guide is within 0.5 – 1mm from the front edge.

[A-B] 0.5 – 1mm

- (A)** Chain guide
- (B)** Front chainwheel (largest chainring)

Tightening torque

5 - 7 N·m

5

Adjust the position of the front derailleur.

Position the front derailleur so that the flat part of the chain guide outer plate is directly above and parallel to the largest chainring.

Turn the support bolt with a 2mm hexagon wrench to adjust.

- (A)** Support bolt

When installing the front derailleur using a clamp band (SM-AD91)

1

2 mm 5 mm

(A) (B) (C) (D) (E)

Install the clamp band to the front derailleur.

Depending on the frame, mount a band adapter to the clamp band.

After that install the front derailleur to the frame.

- (A) Clamp band
- (B) Support bolt
- (C) 2mm hexagon wrench
- (D) Band adapter (for Ø28.6)
- (E) Fixing bolt

Tightening torque	
5 mm	5 - 7 N·m

NOTE

- Use a support bolt and backup plate even when installing the front derailleur using a clamp band (SM-AD91). Refer to "Installation of the front derailleur (direct mount type frame)" for details on use.
- SM-AD11/15 cannot be mounted.

2

(A) (B) [A-B]

Adjust so that there is a clearance of 1 – 3mm between the chain guide outer plate and the largest chainring.

[A-B] Clearance: 1 – 3mm

- (A) Chain guide outer plate
- (B) Largest chainring

▶▶ Installation of the front derailleur

3

Use a 5mm hexagon wrench to secure the chain guide outer plate so that the flat part of the plate is directly above the largest chainring and so that the rear edge of the chain guide is within 0.5 – 1mm from the front edge.

[A-B] 0.5 – 1mm

- (A)** Chain guide
- (B)** Front chainwheel (largest chainring)

Tightening torque

5 - 7 N·m

4

Adjust the position of the front derailleur.

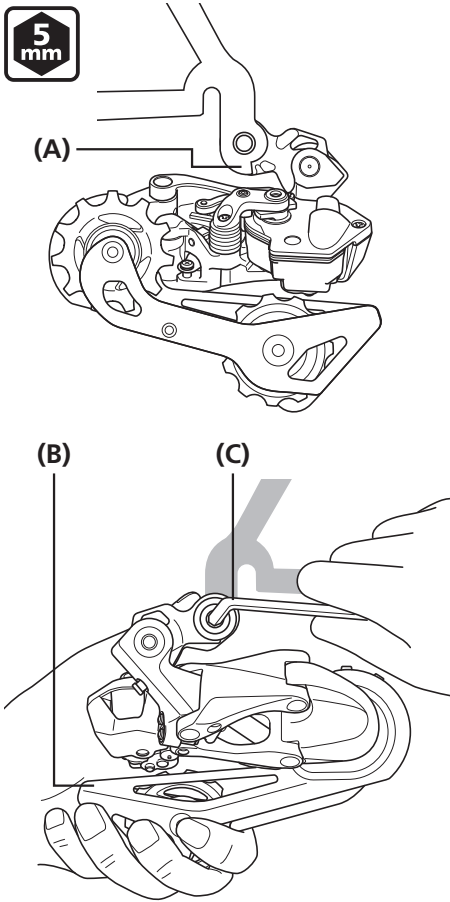

Position the front derailleur so that the flat part of the chain guide outer plate is directly above and parallel to the largest chainring.

Turn the support bolt with a 2mm hexagon wrench to adjust.

- (A)** Support bolt

■ Installation of the rear derailleur

Install the rear derailleur to the frame.

- (A) Fork end tab
- (B) Pulley cage
- (C) 5mm hexagon wrench

Tightening torque	
	8 - 10 N·m

NOTE

Periodically check that there is no gap between the fork end and the bracket as shown in the illustration. If there is a gap between these two parts, problems with gear shifting performance may occur.

■ Direct mount type

Replacing with direct mount type

5
mm

Remove the bracket axle.

■ Installing the shifting switch

SW-R610 (Sprinter switch)

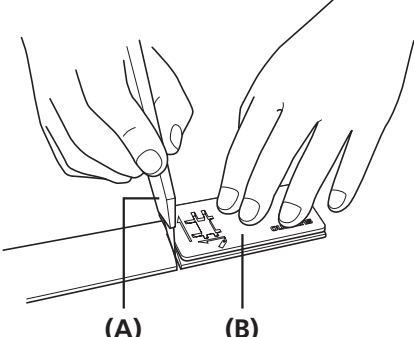

Routing map

- (A) ST-R9150 (R)
- (B) ST-R9150 (L)
- (C) SW-R610

Installation

1

(A) (B)

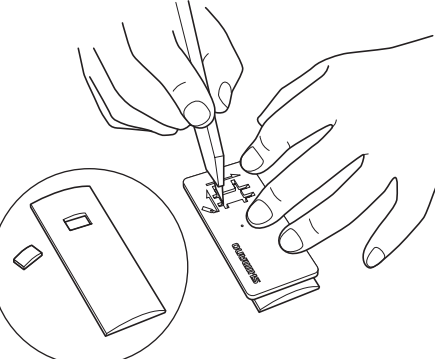

Use a utility knife or similar tool to cut the handlebar tape to the length shown in the illustration.

- (A) Utility knife
- (B) Handlebar tape cutout tool

TECH TIPS

Make sure that you handle the utility knife safely and correctly in accordance with the instructions which are provided with the utility knife.

2

Hold the cut handlebar tape against the tool, and then cut out the holes for the switches while following the directions of the arrows on the tool.

TECH TIPS

Depending on the material used for the handlebar tape, it may be difficult to cut the tape using the tape cutting tool. If this happens, make a hole of the size shown in the illustration.

INSTALLATION

▶▶ Installing the shifting switch

3

Make guide marks on the handlebars at the switch installation positions, and secure the switches with double-sided tape.

(A) Double-sided tape

4

Align the hole in the handlebar tape which was cut with the switch.

5

Wind on the handlebar tape.

At this time, be sure to overlap the tape below the switches.

(z) Overlap

NOTE

In order to protect the cable, use handlebar tape to secure the cable. Do not secure the cable with the zip tie or the bracket for the cycle computer.

TECH TIPS

The illustration shows an example of how to wind the handlebar tape. Wind the handlebar tape on securely so that the switches do not move.

SW-R9150

Routing map

- (A)** ST-R9150 (L)
- (B)** ST-R9150 (R)
- (C)** SW-R9150 (L)
- (D)** SW-R9150 (R)

Installation

Check the markings (R or L) on the shifting switch and adapter, and then attach the shifting switch to the adapter.

- (A)** Markings (R: for right, L: for left)
- (B)** Shifting switch
- (C)** Adapter

 **TECH TIPS**

- Note that one shifting switch is for the left and one is for the right. (For details on operating the shifting switches, refer to the user's manual.)
- The illustration is of the right shifting switch.
- The adapter is available in two variations. Use the variation that matches the shape of the handlebar.

INSTALLATION

▶▶ Installing the shifting switch

2

Pass zip ties through the adapter and shifting switch as shown in the illustration.

(A) Zip tie

TECH TIPS

- Make sure that the zip tie passes through the hole in the shifting switch as shown in the illustration.

- When attaching the zip ties, make sure not to tie up the electric wire too.

3

Secure to the handlebar.

INSTALLATION

▶▶ Installing the shifting switch

4

Cut off any excess zip tie with a pair of nippers or similar.

(A) Zip tie

5

Rotate the zip tie until the square head on the zip tie fits into the notch in the adapter.

SW-R9160 (Shifting switch for aero bar)

Routing map

SM-EW90-A/B

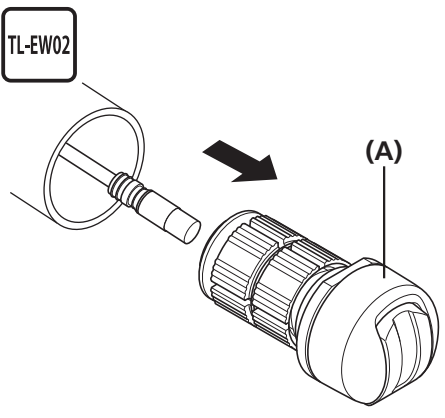

EW-RS910

- (A)** Junction A
- (B)** SW-R9160
- (C)** ST-R9150
- (D)** EW-JC130

Installation

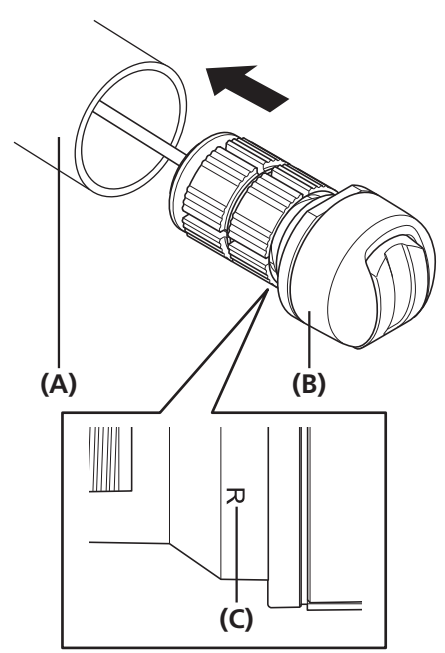

1

Connect the electric wire to the shifting switch.

(A) Shifting switch

2

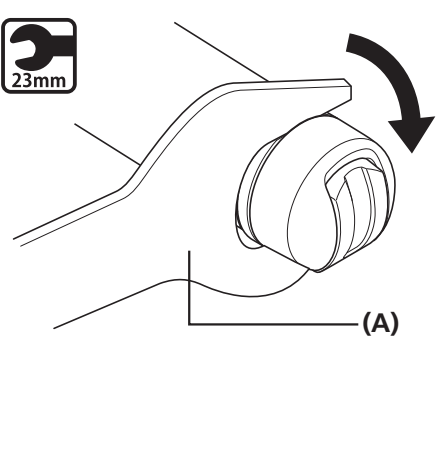

Check the marking (R or L) on the shifting switch and insert it into the end of the aero bar.

(A) Aero bar
(B) Shifting switch
(C) Markings (R: for right, L: for left)

 **TECH TIPS**

Note that one shifting switch is designed for the left and one is for the right. (For details on operating the shifting switches, refer to the user's manual.)

3

Hold the end of the shifting switch and tighten the nut part with a hub spanner.

(A) 23mm hub spanner

Tightening torque	
	1 N·m

NOTE

When securing the shifting switch, make sure to tighten the nut part using a tool. Rotating the end of the shifting switch in an attempt to tighten it will result in damage to the switch.

Example of routing the electric wire

* The illustration takes ST-R9150/SW-R610 as an example.

- (A)** Dummy plug
- (B)** SM-EW90/EW-RS910
- (C)** ST-R9150 (R)
- (D)** SW-R610

 **TECH TIPS**

- This varies depending on the combination of the dual control lever and the gear-shifting switch. For details, refer to the electric wire wiring diagram (junction A).
- For waterproof purposes, use Shimano original tool TL-EW02 on unused ports and install dummy plugs.

■ Installation of junction A (SM-EW90-A/B)

1

Attach to the stem using the band and hook included with SM-EW90.

- (A)** Band
- (B)** Stem
- (C)** Hook

2

Adjust the length of the band according to the thickness of the stem.

Hook the band on the hook and wind it around the stem.

Pull on the band and make sure it is firmly attached.

3

Slide SM-EW90 into the rail section of the hook to install it.

Finished image

- (A)** SM-EW90 Junction A

TECH TIPS

Removal
 Pull up the release lever to slide junction A in the direction of the arrow for removal. Forcibly pulling up the release lever may break the lever.

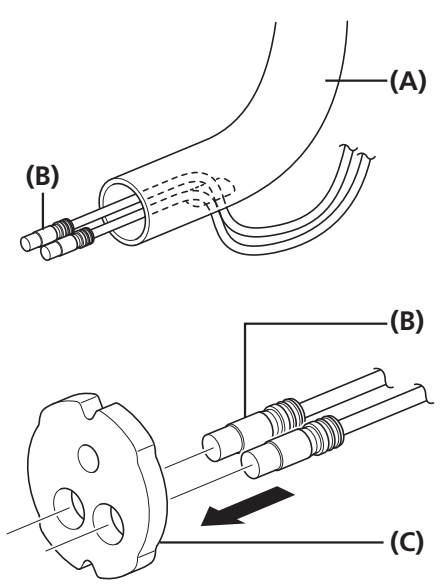

■ Installation of junction A (EW-RS910)

Built-in bar end type

If installing a built-in bar end type junction A, make sure to use a compatible handlebar.

1

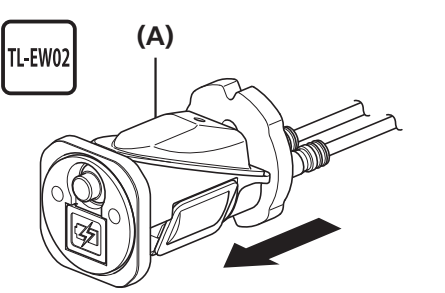

Route the electric wires through the hole in the handlebar as shown in the illustration.

Attach the wire holder to the electric wires.

- (A) Handlebar
- (B) Electric wire
- (C) Wire holder

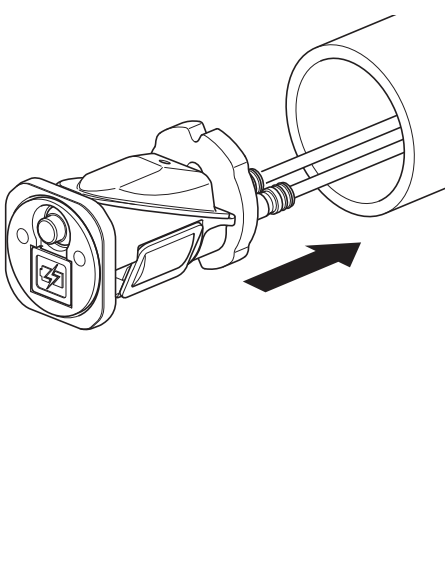

2

Connect the electric wires to junction A.

- (A) Junction A

3

Insert junction A into the handlebar.

 **TECH TIPS**

- Using a gentle twisting motion when inserting junction A prevents the wire holder from becoming arched outward and allows it to be inserted fully and securely.

- Do not tap junction A with a plastic mallet or similar tool when inserting it.

4

Attach the handle holders to the handlebar.

- (A)** Handle holder
- (B)** Double-sided tape

TECH TIPS

- There are two handle holders which differ in shape. Attach [1] first and then [2].

- If the double-sided tapes have diminished in adhesive strength after replacing the handle holders etc., cut some store-bought double-sided tape and replace them.

5

Secure the electric wires to the handlebar using tape or a similar material.

- (A)** Electric wire
- (B)** Tape

TECH TIPS

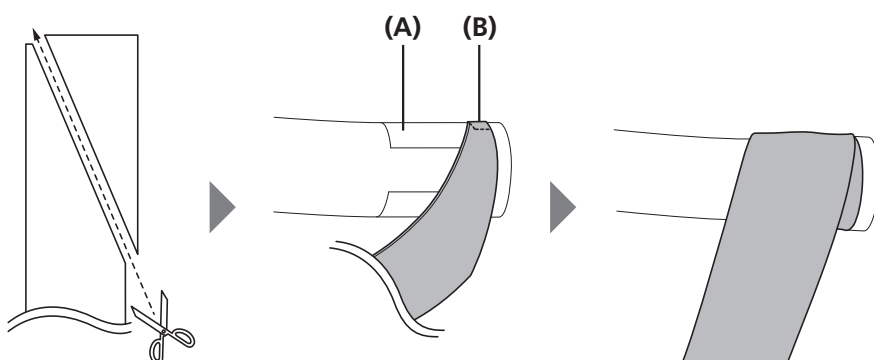

When securing the electric wires, make length adjustments by tucking any excess length into the handlebar etc.

INSTALLATION

▶▶ Installation of junction A (EW-RS910)

6

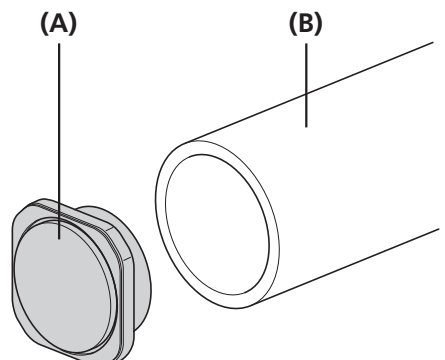

Cut the end of the handlebar tape diagonally and wrap it over the handle holders as shown in the illustrations.

The diagram illustrates three stages of the process. First, a rectangular piece of tape is shown with a dashed line indicating a diagonal cut, and a pair of scissors is positioned to make the cut. Second, the cut piece of tape is shown being wrapped around a handle holder, with labels (A) and (B) pointing to the holder and the tape respectively. Third, the tape is fully wrapped around the handle holder, showing a clean, diagonal finish.

- (A)** Handle holder
- (B)** Handlebar tape

7

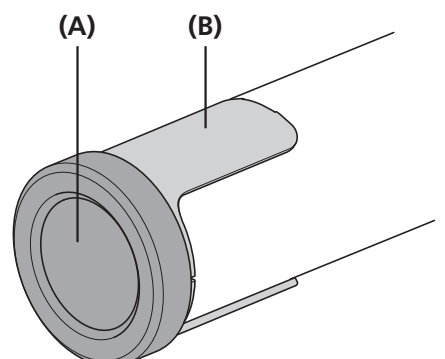

The diagram shows two components: (A) an end cap, which is a circular, multi-layered disc, and (B) a handlebar, which is a cylindrical tube. The end cap is positioned to be inserted into the end of the handlebar.

Insert the end cap into the handlebar end not fitted with junction A.

- (A)** End cap
- (B)** Handlebar

8

The diagram shows the end cap (A) with a handle holder (B) being attached to it. The handle holder is a cylindrical component with a flange that fits over the end cap. A thin rod is shown passing through the handle holder, likely to secure it in place.

Attach the handle holders following the same steps as for the handlebar end fitted with junction A.

- (A)** End cap
- (B)** Handle holder

INSTALLATION

▶▶ Installation of junction A (EW-RS910)

9

Secure the dummy wires to the handlebar using tape or a similar material.

(A) Dummy wires

(B) Tape

TECH TIPS

What are dummy wires?

Dummy wires are attached to ensure that both the handlebar end fitted with junction A and the opposing handlebar end are of the same thickness when wrapped so that discomfort is not caused to the rider when gripping the handlebars.

When securing them to the handlebar, route them in the same manner as the electric wires.

10

Affix handlebar tape following the same steps as for the handlebar end fitted with junction A.

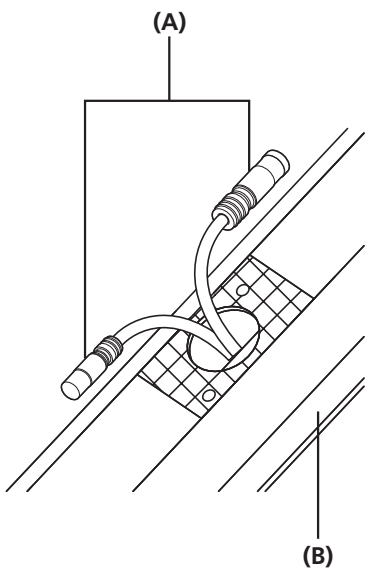

INSTALLATION

▶ Installation of junction A (EW-RS910)

Built-in frame type

If installing a built-in frame type junction A, make sure to use a compatible frame.

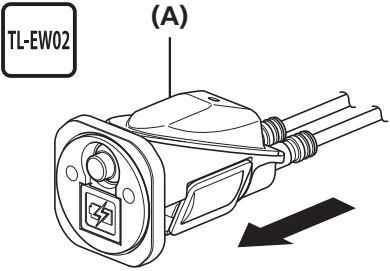

1

Pull out the electric wires through the hole in the frame as shown in the illustration.

- (A) Electric wire
- (B) Frame

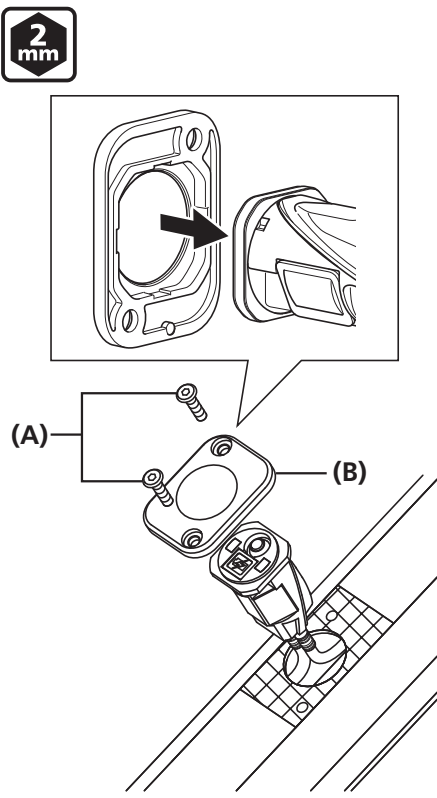

2

Connect the electric wires to junction A.

- (A) Junction A

3

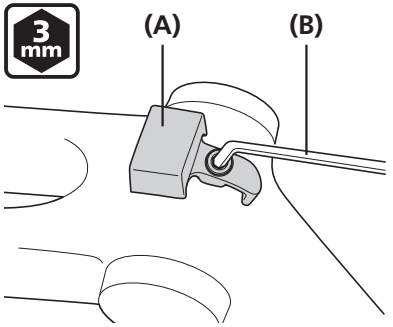

Insert junction A into the frame and attach the holder plate.

- (A) Fixing bolt
- (B) Holder plate

Tightening torque	
	0.26 - 0.4 N·m

■ Installation of junction B

1

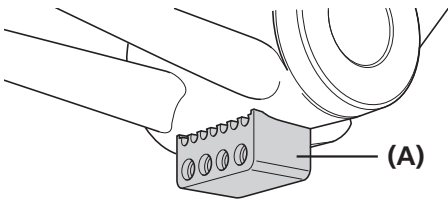

(A) Wire guide
(B) 3mm hexagon wrench

Remove the wire guide from the frame, if attached.

2

Finished image

(A) Junction B

Attach junction B using the wire guide mounting hole.

▶▶ Points to check before attaching the wireless unit (EW-WU111)

■ Points to check before attaching the wireless unit (EW-WU111)

Before installing components, please take note of the following.

Compatible cycle computers

A D-FLY compatible cycle computer is required to use EW-WU111.
For details, refer to the manual for the cycle computer.

The types of information displayed vary by product. Refer to the manual for your cycle computer.

About wireless functions

ANT connection

ANT connection facilitates the transmission of the following three types of information to compatible cycle computers or receivers.

(1)	Gear position (front, rear)
(2)	DI2 battery level information
(3)	Adjustment mode information

For information on which of the above types of information are displayed, refer to the manual for your cycle computer or receiver.

The latest functions can be checked by updating the software via E-TUBE PROJECT. For details, consult the place of purchase.

Bluetooth® LE Connection

E-TUBE PROJECT for smartphones/tablets may be used if a Bluetooth LE connection is established with a smartphone/tablet.

INSTALLATION

▶▶ Attaching the wireless unit (EW-WU111)

■ Attaching the wireless unit (EW-WU111)

Routing map

Connect the electric wires to the wireless unit.

TL-EW02

1

(A) Electric wire

(B) Wireless unit (EW-WU111)

NOTE

Do not position the unit on the side of the bicycle frame, as in the illustrations. If the bicycle collapses, damage to the unit may result if the unit is caught between the bicycle frame and curbstones etc.

2

Secure the electric wires to the outer casing using the clips.

(A) Outer casing

(B) Clips

How to make connections

ANT connection

To make a connection, the cycle computer needs to be in connection mode. For information on how to put the cycle computer into connection mode, refer to the manual for the cycle computer.

1 Put the cycle computer into connection mode.

When using an external battery

Check that the electric wires are connected to the wireless unit, and then remove and remount the external battery.

2

When using a built-in battery

Check that the electric wires are connected to the wireless unit, and then remove the electric wires (two wires) from the wireless unit and reconnect them.

This completes the connection process.

3

TECH TIPS

Connection transmission begins a few seconds after the battery is remounted or the electric wires are reconnected to the wireless unit.

TECH TIPS

- Check on the cycle computer to see if connection was successful.
- If a connection cannot be made in the way described above, refer to the manual for your cycle computer.
- For information on how to show the number of gears or the DI2 battery level, refer to the manual for the cycle computer.

INSTALLATION

▶▶ Attaching the wireless unit (EW-WU111)

Bluetooth® LE connection

Before setting up a connection, turn on Bluetooth LE on the smartphone/tablet.

1 Open E-TUBE PROJECT and set it to listen for Bluetooth LE signals.

2

- **Setting up via information display**

Press the mode switch on the system information display until "C" appears on the display.

The unit on the bicycle will begin signal transmission. The unit name displays in E-TUBE PROJECT.

- **Setting up via junction A**

Press the button on junction (A) until the green LED and red LED begin to blink alternately. The unit on the bicycle will begin signal transmission. The unit name displays in E-TUBE PROJECT.

3

Select the unit name displayed on screen.

TECH TIPS

- To disconnect, cancel the Bluetooth LE connection from the smartphone/tablet. (The cycle computer will exit connection mode and return to regular operation mode.)

Compatibility with dual control lever (ST-R9150 only) built-in remote switch

- Using the dual control lever built-in remote switch in combination with EW-WU111 enables control of the D-FLY compatible cycle computer and related components.
- The dual control lever built-in remote switch sends a switch signal via wireless through EW-WU111. Please check the instruction manuals for compatible components as functions vary depending on the component.

(z) Terminal section

(A) Remote switch (ST-R9150 only)

(B) Brake lever

(C) Shifting switch

■ Installing the battery

In the case of an external battery (battery: SM-BTR1 battery mount: SM-BMR1/2, BM-DN100)

Installing the battery mount

Set the battery mount into position.

Use the bottle cage fixing bolt to temporarily install the battery mount onto the bottom of the bottle cage.

Short type

Use the included M4 bolts to secure the short type.

Long type

For the long type, secure it with the bolts supplied with the frame or the bottle cage.

Refer to the Service Instructions for the bottle cage for details on the tightening torques.

Short type Tightening torque

1.2 - 1.5 N·m

1

2

Leave a space of 108mm or more at the end of the battery mount.

Check that the battery can be inserted and removed while the bottle cage is installed.

(z) 108mm

INSTALLATION

▶▶ Installing the battery

3

Tighten the bolt of the bottle cage to secure the battery mount.

For the long type, use the accessory zip tie to secure the battery mount to the frame.

(A) Zip tie

If there is a mounting boss on the frame
If there is a mounting boss on the frame, the battery mount can be secured to the frame with a bolt.

Battery mount mounting bolt
(M4x15mm)

Tightening torque

1.2 - 1.5 N·m

INSTALLATION

▶▶ Installing the battery

Installation of the electric wire covers

1

Set the electric wire for the battery mount into the groove in the electric wire cover for the battery mount.

2

Place the accessory spacers in between the battery mount and the frame and then secure them by tightening the bolts.

(A) Spacer

TECH TIPS

- If installing the bottle cage, it is easier to install it at this stage.
- Refer to the Service Instructions for the bottle cage for details on the tightening torques.

3

Use the accessory zip tie to secure the battery mount to the frame.

(A) Zip tie

TECH TIPS

If there is a mounting boss on the frame

If there is a mounting boss on the frame, the battery mount can be secured to the frame with a bolt.

Battery mount mounting bolt
(M4×15mm)

Tightening torque

1.2 - 1.5 N·m

INSTALLATION

▶▶ Installing the battery

Installation of the bottle cage adapter

If the bottle cage which is installed to the seat tube interferes with the battery, move the position of the bottle cage upward.

The installation position for the bottle cage can be moved upward by a minimum of 32mm and a maximum of 50mm from the original installation position.

(y) 15mm

(z) 10mm

(A) Spacer

Tightening torque

3 N·m

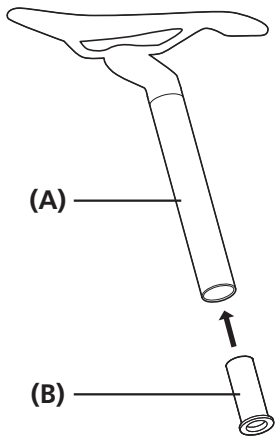

TECH TIPS

- If it interferes with the mounting boss for the front derailleur, use the included spacer.
- Refer to the Service Instructions for the bottle cage for details on the tightening torques.

Built-in battery (SM-BTR2/BT-DN110)

Installing the battery

1

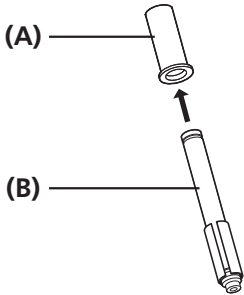

Insert the seat post collar into the seat post.

- (A) Seat post
- (B) Seat post collar

- Depending on the type of frame, the way the lithium ion battery (built-in type) is installed may differ. For details, contact a manufacturer of completed bicycles.
- Prepare a seat post that is compatible with DI2 (SM-BTR2/BT-DN110).
- * If you have any questions, consult with the manufacturer of seat post.

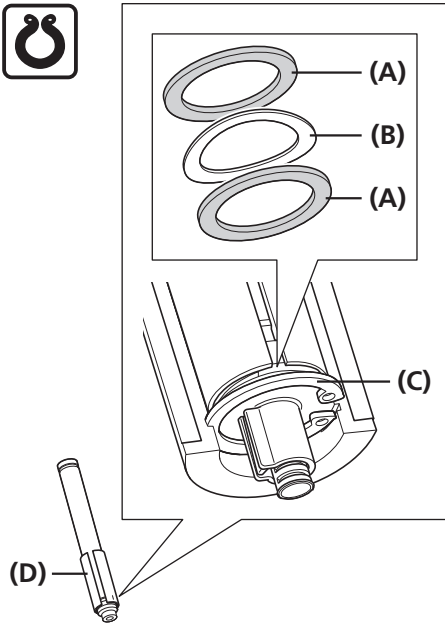

2

Insert internal battery into the collar from the bottom of seat post.

- (A) Seat post collar
- (B) Built-in battery (SM-BTR2/BT-DN110)

3

Mount a wave washer between two washers to the groove of the battery adapter, and fix them in place with a snap ring.

- (A) Washer
- (B) Wave washer
- (C) Snap ring
- (D) Battery adapter

- Secure the built-in battery into the seat post. Depending on the frame, the way the battery is installed may differ. For details, consult with the manufacturer of completed bicycles.
- Use snap ring pliers (with a claw diameter of 2.0mm or less) to mount the snap ring.

CONNECTION OF ELECTRIC WIRES

CONNECTION OF ELECTRIC WIRES

For details on using the Shimano original tool TL-EW02, refer to the section "Using the Shimano original tool TL-EW02".

■ Connection of junction A

ST-R9150 with SM-EW90 routing map

- (A) E-TUBE port x3
- (B) Junction A
- (C) Junction B
- (D) E-TUBE port x5

Wire SM-EW90 with a sufficient margin to allow the positioning of ST-R9150 and the full turning of the handle.

ST-R9150 with EW-RS910 routing map

(z) To frame (Junction B)

(A) E-TUBE port x2

(B) Junction A
(2 port bar end type junction)

(C) Wireless unit

TECH TIPS

Wire EW-RS910 with a sufficient margin to allow the positioning of ST-R9150 and the full turning of the handle.

■ Connection of junction B

External type (SM-JC40)

Connect the electric wires to junction A and junction B.

TL-EW02

- (A) SM-EW90-A Junction A
- (B) SM-EW90-B Junction A
- (C) EW-RS910 Junction A
- (D) E-TUBE port x3
- (E) E-TUBE port x5
- (F) E-TUBE port x2
- (G) Shimano original tool TL-EW02
- (H) Junction B

TECH TIPS

When connecting electric wires, push them in until you feel and hear a click.

1

Connecting to FD-R9150

Attach the plug cover to the electric wire.

Connect the electric wire to the front derailleur together with the plug cover.

- (A) Plug cover
- (B) Electric wire

2

Connecting to other parts

Connect the electric wires to the rear derailleur and the battery mount.

Rear derailleur

Battery mount

2

TL-EW02

(A)

TL-EW02

(A)

(A) Shimano original tool TL-EW02

3

Temporarily secure the electric wire along the frame with tape, and connect it to junction B.

NOTE

When routing the electric wire to the rear derailleur, be sure to install it to the bottom of the chainstay to avoid any interference between the cable and the chain.

Wind any excess length of electric wire inside junction B to adjust the length.

Example of adjusting junction B length

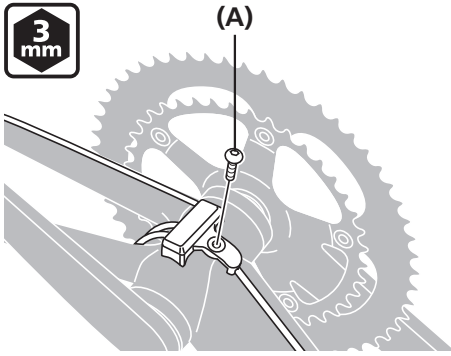

4

CONNECTION OF ELECTRIC WIRES

▶▶ Connection of junction B

5

3 mm

(A)

Once the electric wires have been routed, secure junction B underneath the bottom bracket shell.

(A) Junction B fixing bolt
(10.5mm or 15mm)

Tightening torque

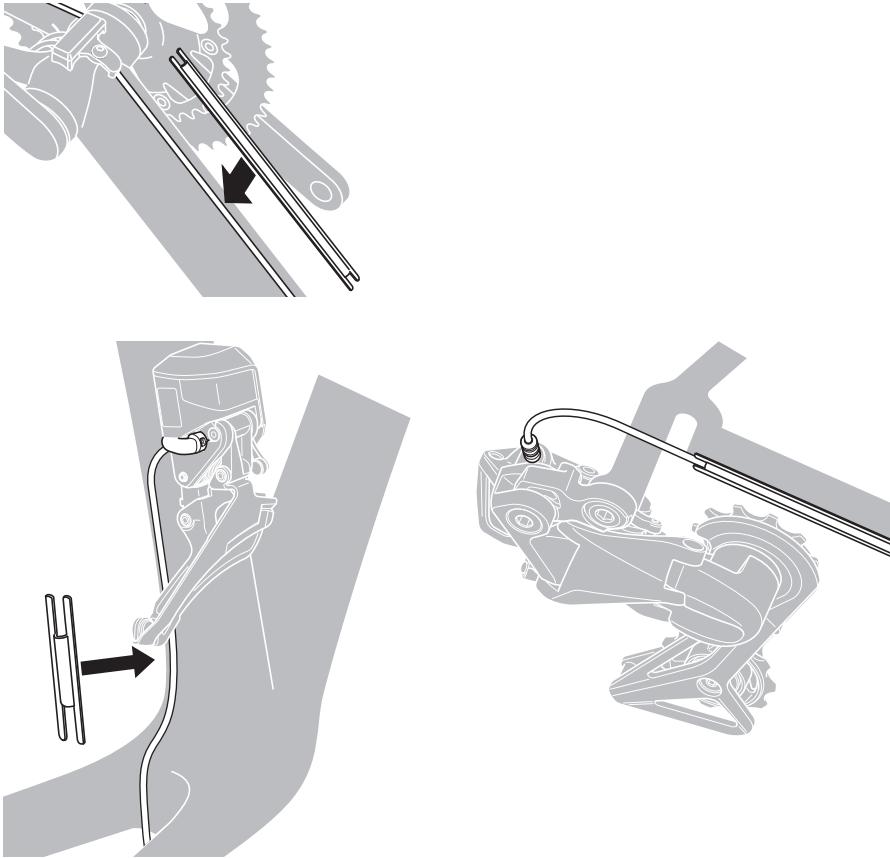

1.5 - 2 N·m

Next, install the electric wire cover onto the frame.

Place the electric wire cover over the electric wires, and then attach it to the frame.

6

NOTE

To ensure adhesion, before installing the electric wire cover, wipe off the grease on the frame with alcohol or a cleaner.

Built-in type (SM-JC41)

First pass the electric wires for junction A, the battery mount, the front derailleur and the rear derailleur through the holes in the frame into the bottom bracket shell.

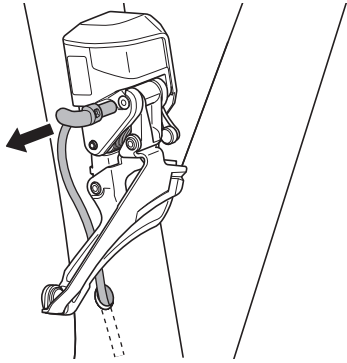

Electric wire for rear derailleur

Electric wire for battery mount
[In the case of an external battery (SM-BTR1)]

Electric wire for front derailleur

Electric wire for battery mount
[In the case of a built-in battery (SM-BTR2/ BT-DN110)]

Electric wire for junction A

(A) Bottom bracket shell

The electric wires for built-in use can be inserted only in one direction. Make sure that you insert them from the direction shown in the illustration.

1

CONNECTION OF ELECTRIC WIRES

▶▶ Connection of junction B

(A) SM-JC40/41 Junction B

TECH TIPS

When connecting electric wires, push them in until you feel and hear a click.

(A) SM-EW90-A Junction A

(B) SM-EW90-B Junction A

(C) EW-RS910 Junction A

(D) E-TUBE port x3

(E) E-TUBE port x5

(F) E-TUBE port x2

(G) Shimano original tool TL-EW02

▶▶ Connection of junction B

Connecting to FD-R9150

Attach the plug cover to the electric wire.

Connect the electric wire to the front derailleur together with the plug cover.

4

- (A) Plug cover
- (B) Electric wire

Connecting to other parts

Connect the electric wires to the rear derailleur and the battery mount.

4

Rear derailleur

Battery mount

- (A) Shimano original tool TL-EW02

■ Connecting to the dual control lever

ST-R9150

1

Pull back the bracket cover from the rear and lift up the connector cover.

- (A) Bracket cover
- (B) Connector cover

2

TL-EW02

Use TL-EW02 to connect the connector of the electric wire to an E-TUBE port in the lever.

Connect to either E-TUBE port [X] or E-TUBE port [Y].
(A connection can be made with either E-TUBE port [X] or E-TUBE port [Y].)

Be sure to push them together until they connect with a click.

- (A) E-TUBE port [X]
- (B) E-TUBE port [Y]
- (C) Port for remote sprinter shifter
- (D) Shimano original tool TL-EW02

NOTE

- When the handle is gripped or the bar tape is wound, the electric wires may be pulled out. By allowing sufficient wire length, accidental disconnection can be prevented after winding the bar tape.
- This length margin of electric wire is also necessary to open the bracket cover when additional switch and the SM-PCE1 is connected.

TECH TIPS

The remaining unused E-TUBE port [X] or E-TUBE port [Y] can be used for an additional shifting switch or SM-PCE1. (The port for remote sprinter shifter cannot be used for an additional shifting switch or SM-PCE1.) This is an example connection.

CONNECTION OF ELECTRIC WIRES

▶▶ Connecting to the dual control lever

SW-R9160/ST-R9160

For the following models, attach the electric wire of the product to junction A.

TL-EW02

SW-R9160

ST-R9160

(A) Junction A

(B) Shimano original tool TL-EW02

SW-R610

TL-EW02

SW-R610

(A) Shimano original tool TL-EW02

TECH TIPS

The port shape is different only for SW-R610.

■ Routing junction B and the electric wires inside the frame

1

Pass the electric wires for the front derailleur and the rear derailleur through the seat tube and chainstay respectively.

- (y) For front derailleur
- (z) For rear derailleur

2

Pass the electric wires for junction A, the battery mount, and junction B through the down tube.

- (y) For junction A
- (z) For battery mount
- (A) Junction B

(A) Junction B

NOTE

Be careful not to damage any parts with the screws of the bottom bracket shell.

3

Set the electric wires so that only the electric wires for the front derailleur and the rear derailleur are visible inside the bottom bracket shell, and if any extra parts such as wire holders are protruding, push them back inside the frame.

SM-BTR2/BT-DN110

Follow the same procedure when using SM-BTR2/BT-DN110 as a battery adapter.

- (w) For lithium ion battery (built-in type)
- (x) For front derailleur
- (y) For rear derailleur
- (z) For junction A
- (A) Junction B

(A) Junction B

■ Assembly of the bottom bracket

1

When installing the inner cover to the bottom bracket shell, make sure that the electric wires for the front derailleur and the rear derailleur pass over the top of the inner cover.

(A) Inner cover
(B) Adapter

2

Install the inner cover to the bottom bracket adapter.

(A) Adapter
(B) Inner cover

-
- (A) Inner cover
 - (B) Adapter
-

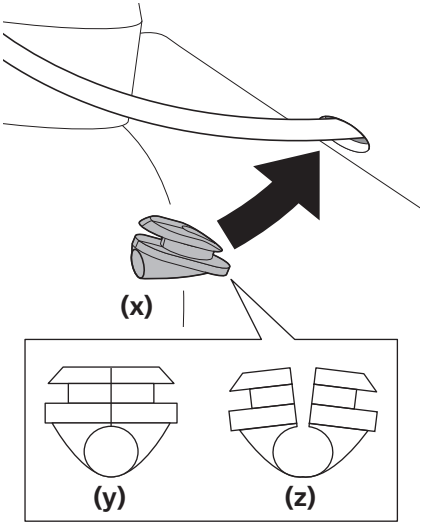

-
- (A) Adapter
 - (B) Inner cover
-

NOTE

If using a frame which does not have enough space between the inside of the bottom bracket shell and the inner cover to route the electric wires use an inner cover which is sold separately.

■ Installation of grommets

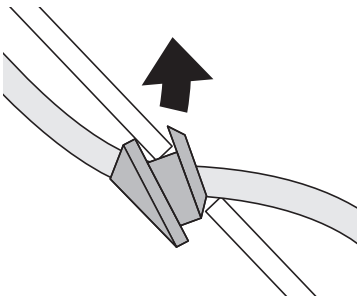

1

Install grommets in appropriate positions for the electric wires.

- (x) Junction A side
- (y) Close
- (z) Open

2

Insert the grommets into the holes in the frame starting with the rear end.

TECH TIPS

There are two types of grommets. Choose one according to the shape of the hole in the frame.

Circle: SM-GM01

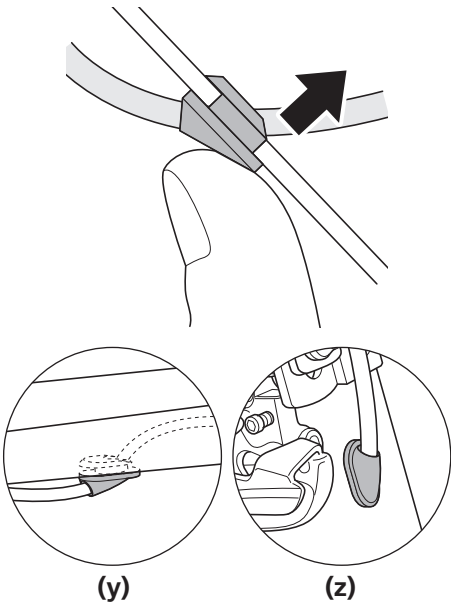

Ellipse: SM-GM02

▶▶ Checking connections

3

Push the other end to set in place.

- (y) Rear derailleur
- (z) Front derailleur

■ Checking connections

1 After connecting the electric wires to all of the components, install the battery and check the operation.

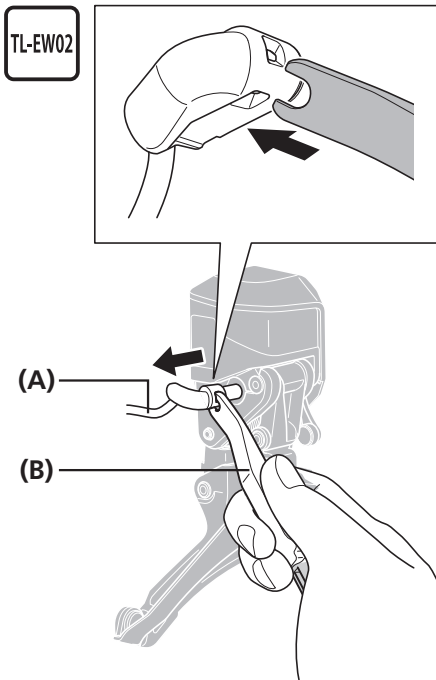

2 Operate the shifting switches and check that the front and rear derailleurs both operate.

⚠ CAUTION

Make sure to remove the battery before performing operations that involve close proximity to the front derailleur, such as installation/uninstallation of the front chainwheel or front derailleur, or installation/adjustment of the chain. If the front derailleur is activated by accident, there is a risk of your fingers getting caught and injury.

■ Disconnection of the electric wires

FD-R9150

Insert the tips of the wide end of the TL-EW02 Shimano original tool into the holes (2 places) in the plug cover to disconnect the electric wire.

- (A) Electric wire
- (B) Shimano original tool TL-EW02

NOTE

- Do not keep connecting and disconnecting the small waterproof connector. The waterproof section or the connecting section may become worn or deformed, and the function may be affected.
- When removing the electric wire, use the wider end of the Shimano original tool TL-EW02 as shown in the illustration. If you pull too firmly on the connectors, problems with operation may occur.

Disconnection of other parts

With the base portion of the hook firmly held down using the wider end of the Shimano original tool TL-EW02, remove the electric wire.

RD-R9150

SM-JC40

ST-R9150

SM-JC41

- (A) Shimano original tool TL-EW02
- (B) Electric wire

NOTE

- Do not keep connecting and disconnecting the small waterproof connector. The waterproof section or the connecting section may become worn or deformed, and the function may be affected.
- When removing the electric wire, use the wider end of the Shimano original tool TL-EW02 as shown in the illustration. If you pull too firmly on the connectors, problems with operation may occur.

HOW TO OPERATE

HOW TO OPERATE

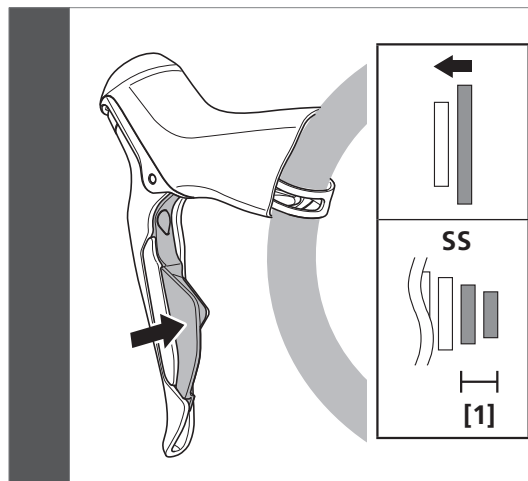

■ Gear position control

This gear-shifting system is programmed to prevent shifting into gears that would lower the chain tension. Therefore, if you try to shift into such gears, shifting may function differently from the basic operations.

The illustration below shows the gear positions that would lower the chain tension and the shifting operations performed when you shift into those gears.

Points to remember when shifting the front derailleur

When you shift into the smallest chainring, shifting is controlled as follows.

When the chain is in the range [1], shown in the illustration
Operating the shifting switch does not shift the front derailleur.

Instead, the rear derailleur is shifted down through two gears.

When the chain is outside the range [1], shown in the illustration
Operating the shifting switch shifts the front derailleur to the smallest chainring.

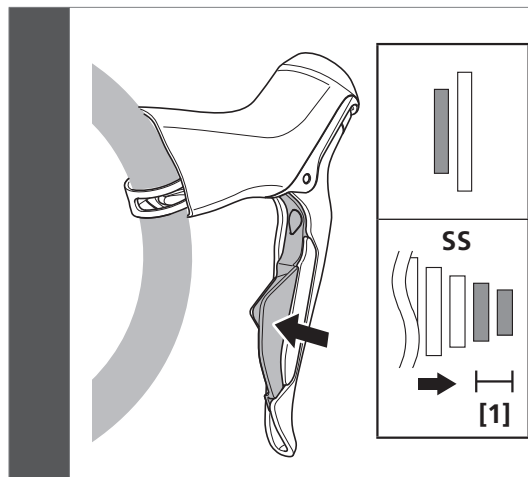

[1] From the smallest to the second sprocket.

NOTE

- If you use combinations of front and rear derailleurs besides those recommended, the shifting-restricted range may become larger.
- Restrictions on gear position can be disabled via the Customize menu in E-TUBE PROJECT. (Restrictions cannot be disabled for 52-36T or 50-34T.)

Points to remember when shifting the rear derailleur

When the chain position is in the smallest front chainring, gear shifting is controlled as follows.

When shifting the rear in the direction of the smallest sprocket
Operating the shifting switch will not shift the chain into the range [1], shown in the illustration.

[1] From the smallest to the second sprocket.

ADJUSTMENT

ADJUSTMENT

■ Adjustment of the rear derailleur

1 Install the battery.

2

Mount the chain on the largest sprocket, and shift gears turning the crank arm.

Turn the end adjust bolt to move the guide pulley as close to the sprocket as possible but not so close that the chain gets jammed.

Next, check that the chain does not get jammed when it is on the smallest sprocket.

If there is any slack in the chain when the chain is mounted on the smallest chainring and smallest sprocket, adjust the end adjust bolt to eliminate it.

- (A)** Largest sprocket
- (B)** Smallest sprocket
- (C)** End adjust bolt
- (D)** Guide pulley

3

Shift the rear derailleur to the 5th sprocket position.

ADJUSTMENT

► Adjustment of the rear derailleur

SM-EW90-A/B

Press the button at the junction A until the red LED illuminates in order to switch to rear derailleur adjustment mode.

- (A) Junction A
- (B) LED window for button
- (C) Button
- (D) Red LED

NOTE

Note that if you keep pressing the button after the red LED has illuminated, RD Protection Reset will begin.

TECH TIPS

For details on RD Protection, refer to "About RD Protection Function" in the user's manual for the rear derailleur (D12).

4

EW-RS910

ADJUSTMENT

► Adjustment of the rear derailleur

5

If shifting switch [X] is pressed once while the initial setting condition is active, the guide pulley will move one step toward the inside.

If shifting switch [Y] is pressed once, the guide pulley will move one step toward the outside.

The guide pulley can move 16 steps inward and 16 steps outward from the initial position, for a total of 32 positions.

TECH TIPS

When adjusting, the guide pulley will overrun slightly and then move back in an exaggerated movement so that you can check the adjustment direction. When checking the positions of the guide pulley and the sprocket, check the position where the guide pulley finally stops.

6

While turning the front chainwheel, operate shifting switch [X] to move the guide pulley toward the inside until the chain touches the 4th sprocket and makes a slight noise.

ADJUSTMENT

► Adjustment of the rear derailleur

7

Next, operate shifting switch [Y] 4 times to move the guide pulley toward the outside by 4 steps to the target position.

(y) 4 steps

(z) 4 times

SM-EW90-A/B

8

EW-RS910

Press the button at junction A until the red LED turns off in order to switch from rear derailleur adjustment mode to gear shifting mode.

Shift to each gear and check that no noise is generated at any gear position.

If adjustment is needed, switch back to adjustment mode and readjust the rear derailleur.

NOTE

Change to adjustment mode, operate shifting switch [Y], and move the guide pulley outwards until shift shock is alleviated.

Next, adjust the stopper bolt.

Adjustment of the low-side stopper bolt

Shift the rear derailleur to the largest sprocket, and then tighten the low-side stopper bolt until it just touches the left link.

If it is tightened too much, the motor will detect a problem and gear shifting will not operate correctly.

- (A)** 2mm hexagon wrench
- (B)** Low-side stopper bolt

Possible occurrences if the adjustment bolt is overtightened

- Gears do not shift to the top/low gear. (Even if you shift gears to the top or low gear, the gear may shift back by one gear after about 5 seconds.)
- Noise does not stop.
- The battery level drops quickly. (Load is being placed on the motor)
- The motor may be damaged. (irreparable)

9

Adjustment of the top-side stopper bolt

Shift to the smallest sprocket, and then tighten the top-side stopper bolt until it touches the left link at the position where the rear derailleur stops.

From this position, turn the top-side stopper bolt counterclockwise one turn so that an over-stroke allowance can always be maintained.

- (A)** 2mm hexagon wrench
- (B)** Top-side stopper bolt

By shifting from the largest sprocket to the smallest sprocket, the rear derailleur will move toward the outside by the over-stroke allowance and then move back.

■ Installing the chain

Chain length

Mount the chain on to the largest sprocket and the largest chainring.

Next, add 2 links to set the length of the chain.

- (A)** Largest sprocket
- (B)** Chain
- (C)** Largest chainring
- (D)** Pin for preventing chain derailment

NOTE

The rear derailleur plate assembly is equipped with a pin or plate that prevents the chain from derailing.

When passing the chain through the rear derailleur, pass it through the rear derailleur body from the side of the chain derailment prevention plate as shown in the illustration. If the chain is not passed through the correct position, damage may be caused to the chain or rear derailleur.

ADJUSTMENT

▶▶ Adjustment of the front derailleur

■ Adjustment of the front derailleur

Checking bolt positions

The top adjustment bolt and the support bolt are close to each other.

Make sure that you are using the correct bolt for adjustment.

(A) Support bolt

(B) Top adjustment bolt

ADJUSTMENT

► Adjustment of the front derailleur

Top adjustment

1

Set the chain on the largest chainring and the smallest sprocket.

- (A) Largest chainring
- (B) Smallest sprocket

2

Use a 2mm hexagon wrench to turn the top adjustment bolt.

Adjust so that there is a clearance of 0.5 - 1mm between the chain and the chain guide outer plate.

[B-C] 0.5 - 1mm

- (A) Top adjustment bolt
- (B) Chain guide outer plate
- (C) Chain

Low position electrical adjustment

1

Set the chain on the smallest chainring and the largest sprocket.

- (A)** Smallest chainring
- (B)** Largest sprocket

2

SM-EW90-A/B

Press the button on junction A until the red LED illuminates in order to switch to adjustment mode.

- (A)** Junction A
- (B)** LED window for button
- (C)** Button
- (D)** Red LED

NOTE

Note that if you keep pressing the button after the red LED has illuminated, RD Protection Reset will begin.

EW-RS910

ADJUSTMENT

► Adjustment of the front derailleur

3

Operate shifting switch [X] or [Y].

Adjust so that there is a clearance of 0 – 0.5mm between the chain and the chain guide inner plate.

[A-B] 0 – 0.5mm

(A) Chain

(B) Chain guide inner plate

NOTE

Shift the front derailleur and the rear derailleur to all gears to make sure that the chain does not contact the chain guide.

TECH TIPS

- The adjustable range is 37 steps. (18 steps inward and 18 steps outward from the initial position)
- When adjusting, the chain guide will overrun slightly and then move back in an exaggerated manner to help in verifying the adjustment direction. Make sure to check the positions of the chain guide and the chain when the chain guide has come to a stop.

4

SM-EW90-A/B

Press the button at junction A until the red LED turns off in order to switch from rear derailleur adjustment mode to gear shifting mode.

(A) Button

EW-RS910

Top position electrical adjustment

1

Set the rear derailleur to the largest sprocket.

- (A)** Largest chainring
- (B)** Largest sprocket

2

SM-EW90-A/B

Press the button on junction A until the red LED illuminates in order to switch to adjustment mode.

- (A)** Junction A
- (B)** LED window for button
- (C)** Button
- (D)** Red LED

NOTE

Note that if you keep pressing the button after the red LED has illuminated, RD Protection Reset will begin.

EW-RS910

ADJUSTMENT

▶ Adjustment of the front derailleur

3

Operate shifting switch [X] or [Y].

Adjust so that there is a clearance of 0 – 0.5mm between the chain and the chain guide inner plate.

[A-B] 0 – 0.5mm

(A) Chain

(B) Chain guide inner plate

NOTE

Shift the front derailleur and the rear derailleur to all gears to make sure that the chain does not contact the chain guide.

TECH TIPS

- The adjustable range is 25 steps. (12 steps inward and 12 steps outward from the initial position)
- When adjusting, the chain guide will overrun slightly and then move back in an exaggerated manner to help in verifying the adjustment direction. Make sure to check the positions of the chain guide and the chain when the chain guide has come to a stop.

4

SM-EW90-A/B

Press the button at junction A until the red LED turns off in order to switch from rear derailleur adjustment mode to gear shifting mode.

(A) Button

EW-RS910

ADJUSTMENT

▶▶ Adjustment of lever stroke

■ Adjustment of lever stroke

ST-R9150

Adjust the position of the lever body using the reach adjustment screw.

- (y) Counterclockwise:
Increases the lever stroke
- (z) Clockwise: Decreases the lever stroke

- (A) Slotted screwdriver
Blade width: 4.0 - 5.0mm
Blade thickness: 0.5 - 0.6mm

NOTE

Make sure that braking operates properly after the adjustment.

ST-R9160

- (y) Counterclockwise:
Increases the lever stroke
- (z) Clockwise:
Decreases the lever stroke

- (A) Reach adjustment bolt
- (B) 2mm hexagon wrench

NOTE

Make sure that braking operates properly after the adjustment.

CHARGING THE BATTERY

CHARGING THE BATTERY

Use the specified combination of lithium ion batteries, chargers, and linkage devices.

Any other combinations may cause rupture or fire.

Fully understand the precautions for use provided at the beginning of the dealer's manual before using the products.

Names of parts

External type (SM-BCR1/SM-BTR1)

Charger (SM-BCR1)

- (A)** Electrical contacts:
If these are modified or damaged, problems with operation will occur. Be very careful when handling them.
- (B)** ERROR indicator:
This flashes when there is an error.
- (C)** CHARGE indicator:
This illuminates while charging is in progress.
- (D)** Power cord connector
- (E)** Power cord:
Insert into the connector.
(Insert all the way)
- (F)** Charger cord (Sold separately)

This is a special charger for charging Shimano lithium ion batteries (SM-BTR1).

Special battery (SM-BTR1)

- (A)** Electrical contacts:
If these are modified or damaged, problems with operation will occur. Be very careful when handling them.

This is a lithium ion battery.
Use the special charger (SM-BCR1) to charge the battery.

Built-in type (SM-BCR2/SM-BTR2, BT-DN110)

USB cable

- (A)** Micro USB plug:
Connect to the battery charger.
- (B)** USB plug:
Connect to a PC USB port or an AC adapter with a USB port.

Charger (SM-BCR2)

- (A)** Micro USB connector
- (B)** CHARGE indicator
- (C)** ERROR indicator
- (D)** Plug for product connection:
Connect to junction A.

 **TECH TIPS**

- This is a special charger for charging Shimano lithium ion batteries (SM-BTR2/ BT-DN110).
- If water collects in the product connector, connect the plug only after wiping it off.

Special battery (SM-BTR2/BT-DN110)

 **TECH TIPS**

This is a lithium ion battery.
Use the special charger (SM-BCR2) to charge the battery.

■ Charging method

External type (SM-BCR1/SM-BTR1)

1 Insert the power plug of the battery charger into an electrical outlet.

2

Insert the battery (SM-BTR1) into the battery charger (SM-BCR1) as far as it will go.

TECH TIPS

Charging takes up to approximately 1.5 hours. (Note that the actual time will vary depending on the remaining battery charge.)

3

When the CHARGE indicator (orange) switches off, charging is complete.

(A) CHARGE indicator

TECH TIPS

If the ERROR indicator flashes, it means that there may be a problem with the battery. Refer to "When charging is not possible" for more information.

4

Disconnect the power plug of the battery charger from the electrical outlet and store the battery charger in a suitable place as specified in the Safety Precautions.

Built-in type (SM-BCR2/SM-BTR2, BT-DN110)

1

Connect the battery to the junction A.

TECH TIPS

- The battery can be charged by using an AC adapter with a USB port or connecting the charger to the USB connector of a PC.

2

Connect the charging cable of the charger to the junction A.

- (z) To an AC adapter with a USB port or PC

(A) Charging port

TECH TIPS

- The position of the charging port differs depending on the product.
- The charging time of an AC adapter with a USB port is about 1.5 hours, and that of computer USB port type about 3 hours. (Note that the actual time will vary depending on the amount of charge remaining in the battery. Depending on the specifications of the AC adapter, recharging via the AC adapter may require as much time (about 3 hours) as recharging via PC.)

3

When the CHARGE indicator (orange) switches off, charging is complete.

TECH TIPS

If ERROR indicator or CHARGE indicator blinks, refer to "When charging is not possible".

4

Disconnect the charging cable or USB cable, and keep it at the location specified in the precautions.

CHARGING THE BATTERY

▶▶ When charging is not possible

■ When charging is not possible

External type (SM-BCR1/SM-BTR1)

Remove the battery from the battery charger, disconnect the power plug of the battery charger from the electrical outlet, and then repeat the charging operation.

If charging is still not possible after the above steps have been carried out, the ambient temperature may be too low or too high, or there may be a problem with the battery.

(z) If charging is not possible, the ERROR indicator on the battery charger will flash.

▶▶ When charging is not possible

Built-in type (SM-BCR2/SM-BTR2, BT-DN110)

1 Make sure that only one unit of SM-BCR2 is connected to a PC.

If the ERROR indicator blinks

If the ERROR indicator blinks, the ambient temperature during charging may fall outside the operating temperature limits.

Check that the temperature is appropriate.

(A) ERROR indicator

If the CHARGE indicator blinks

If the CHARGE indicator blinks, refer to the following.

- The current capacity of your AC adapter with a USB port is lower than 1.0A_{dc}.
⇒ Use an AC adapter with a USB port with a current capacity equal to or higher than 1.0A_{dc}.
- Connection is using a USB hub.
⇒ Remove the USB hub.

(A) CHARGE indicator

If none of the above (1 to 2) is the case, the battery or junction may be faulty.

NOTE

If the CHARGE indicator does not light up or goes out soon, the battery may be fully charged. Check the remaining charge in the battery via junction A or the system information display.

If the battery is low or dead, contact the place of purchase or a bicycle dealer.

If it becomes impossible to charge, the CHARGE indicator (orange) or ERROR indicator of the battery charger will blink.

3

CONNECTION AND COMMUNICATION WITH DEVICES

CONNECTION AND COMMUNICATION WITH DEVICES

Connecting the bicycle (system or components) to a device enables such operations as updating system firmware and customization.

You need E-TUBE PROJECT to configure the system and update firmware.

Download E-TUBE PROJECT from our support website (<http://e-tubeproject.shimano.com>).

For information on how to install E-TUBE PROJECT, check the support website.

TECH TIPS

You need SM-PCE1 and SM-JC40/JC41 to connect the system to a PC. They are not required if there is an available port. Firmware is subject to change without notice.

System requirements

	PC linkage device	E-TUBE PROJECT	Firmware
SM-BMR2/ SM-BTR2	SM-PCE1/ SM-BCR2	Version 3.2.0 or greater	Version 3.0.0 or greater
BT-DN110/ BM-DN100			Version 4.0.0 or greater <small>*Pre-installed firmware is version 4.0.0.</small>

NOTE

If your versions of E-TUBE PROJECT software and firmware for each component are not up to date there could be problems operating the bicycle. Check the versions and update them to the latest ones.

■ Settings customizable in E-TUBE PROJECT

Display settings	Display time	Sets the time until the display turns off when the display monitor is left unattended.
Switch function setting		Modify the shifting switch settings.
Shift mode setting		Change shift mode setting.
Multi-shift mode setting	Multi-shift mode ON/OFF	Select whether or not to use multi-shift.
	Gear-shifting interval	Sets the gear-shifting interval for multi-shift.
	Gear number limit	Sets the limit on the number of gears shifted when the shifting switch is held down.

Shift mode setting (synchronized shifting)

Synchronized shift is a function that maintains optimal front and rear gear positioning by interlinking the shifting of the front and rear derailleurs. There are two Synchronized shift modes, as explained below.

Semi-synchronized shift

Mechanics

The rear derailleur automatically shifts when the front derailleur is shifted.

The rear derailleur can be set to jump from 1 to 4 gears per shift. (Default setting: 2 gears)

Shifting from largest to smallest chainring

The rear derailleur jumps 1 to 4 gears outward per shift. (Default setting: 2 gears)

Shifting from smallest to largest chainring

The rear derailleur jumps 1 to 4 gears inward per shift. (Default setting: 2 gears)

Synchronized shift

Mechanics

The front derailleur automatically shifts when the rear derailleur is shifted. (The shift points are initially set as shown in the table.)

MAINTENANCE

MAINTENANCE

■ Replacing the bracket cover

Always replace the bracket cover with the lever removed from the bicycle as shown in the illustration.

The tabs on the bracket cover each fit to a matching slot on the bracket.

NOTE

Note the markings when replacing.
R: for right
L: for left

* A label is engraved in the bracket cover.

TECH TIPS

Wipe a little rubbing alcohol inside the bracket cover to make installation easier.

■ Disassembly of the bracket body and lever body

1

Use the Shimano original tool which is sold separately to remove the E-ring.

Hook section [1] of the Shimano original tool on the E-ring and remove it.

(A) Special E-ring removal tool Y6RT68000

(A) Special E-ring removal tool Y6RT68000

! CAUTION

When you remove the E-ring, it may pop out; wear protective glasses while removing it. Check that there is no one or no object around you before starting the work.

2

Insert a hexagon wrench or a similar tool into the hole in the lever axle, and then tap it with a plastic mallet to push out the lever axle.

(A) Hexagon wrench
(B) Lever axle

(A) Hexagon wrench
(B) Lever axle

3

Pull back the bracket cover from the front and remove the return spring using an E-ring removal tool or similar tool.

(A) Return spring

(A) Return spring

The lever body can be disassembled from the bracket body by removing the two switch unit fixing screws and then removing the switch unit with the switch return spring and the switch springs.

- (A) Switch unit fixing screw (Hexalobular[#5])
- (B) Switch unit
- (C) Switch return spring
- (D) Switch springs

NOTE

When removing the switch unit, the switch unit may be thrust open by the switch return spring or the switch return spring may fly out. Make sure to hold down the switch unit and remove it gradually.

4

Assembly of the switch unit

1

Attach the switch unit setting plate to the lever.

- (A) Switch unit setting plate

2

Check that the buttons are attached to the springs, then insert the switch springs into the holes in the switch unit setting plate.

- (z) Applying grease
Premium grease (Y-04110000)

- (A) Switch spring

3

Set the switch return spring in the hole in the switch unit setting plate, as shown in the illustration.

- (A) Switch return spring

▶▶ Assembly of the switch unit

4

Place the switch unit onto the mounting surface of the setting plate.

5

Press the switch unit by hand so that the switch springs go into the grooves in the buttons, and then push the shifting switches [X] and [Y] in as far as they will go.

- (A)** Switch unit
- (B)** Shifting switches [X] [Y]

6

Make a gap between the switch unit and the setting plate and check that the end of the rubber on the switch unit is on the button.

Tightening torque	
	0.1 N·m

■ Assembly of the bracket body and lever body

1

Assemble the bracket body and the lever body, and then attach the return spring.

(A) Return spring

2

Align the axle holes, and then press-fit the lever axle.

Make sure to route the cable from the switch behind the lever axle, as shown in illustration [1].

(A) E-ring groove

(B) Lever axle

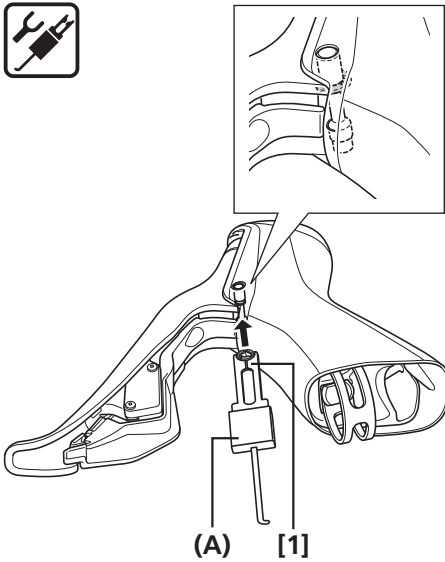

(C) Cable

- The correct direction for the lever axle is for the E-ring groove to face up.
- Check that the surface of the bracket body and the top end of the lever axle are flush with each other so that the E-ring will fit into the groove.

► Replacement of the pulley

3

Use part [1] of the Shimano original tool to install the E-ring.

(A) Special E-ring removal tool

NOTE

Do not use the removed E-ring again. Be sure to use a new product (Y46RU41100: service parts code).

TECH TIPS

Operate the shifting switches [X] and [Y] to check that they turn on, and check that the lever operates smoothly.

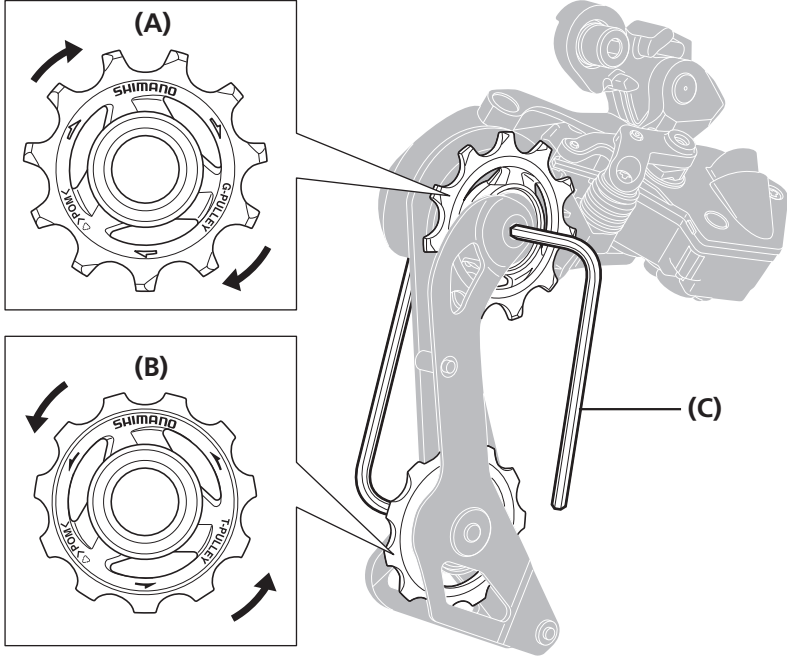

■ Replacement of the pulley

Replace pulleys using a 3mm hexagon wrench.

The guide pulley and tension pulley are marked on one side with arrows to indicate the direction of rotation.

When attaching the pulleys, make sure to orient them so that the sides marked with arrows are visible when viewed from the reverse side of the derailleur, as shown in the illustration.

- (A)** Guide pulley
- (B)** Tension pulley
- (C)** 3mm hexagon wrench

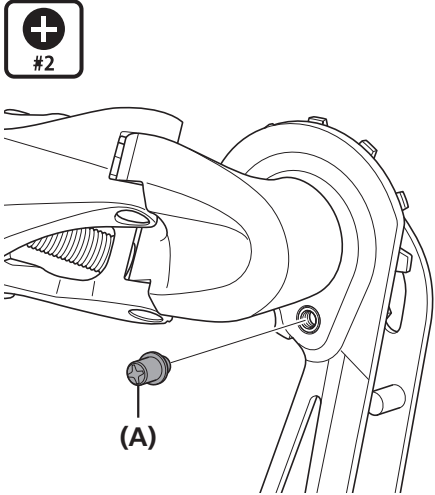

Tightening torque

	2.5 - 5 N·m
---	--------------------

■ Replacement of the plate and the plate tension spring

Removal

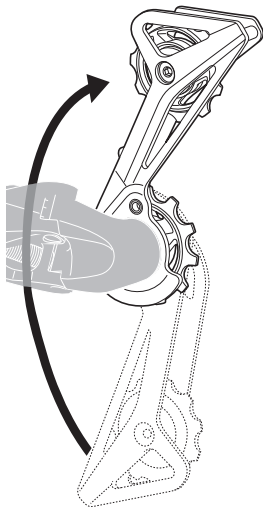

1

Remove the plate stopper pin.

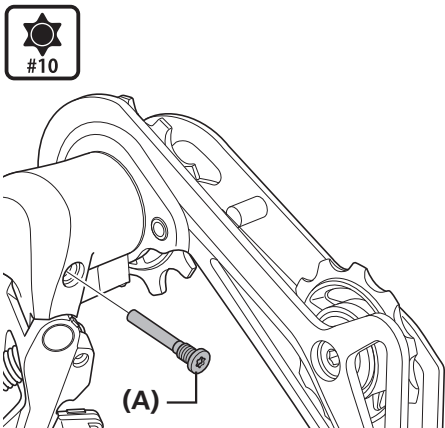

(A) Plate stopper pin	
Tightening torque	
	1 N·m

2

Turn the plate to loosen the plate tension spring as shown in the illustration.

3

Using a Hexalobular[#10], remove the stopper bolt.

(A) Stopper bolt	
Tightening torque	
	1 N·m

►► Replacement of the plate and the plate tension spring

Cautions when assembling

Assemble by carrying out the removal procedure in reverse while adhering to the following cautions.

(A) Plate axle

(A) Plate axle
(B) Plate tension spring
